

Universal Gravitation

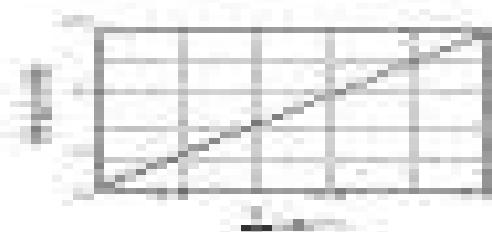

Newton's law of universal gravitation is a theory that describes the gravitational force between objects with mass. It is also known as the law of gravitation.

Newton's law of universal gravitation states that every object in the universe attracts every other object with a force of attraction. The force of attraction is proportional to the mass of the objects and inversely proportional to the square of the distance between them.

Newton's law of universal gravitation can be used to calculate the gravitational force between two objects. The gravitational force between two objects is proportional to the mass of each object and inversely proportional to the square of the distance between them. The gravitational force is also proportional to the product of the two masses. The gravitational force is attractive, meaning it pulls the two objects toward each other.
