*Studying Visual and Spatial Reasoning for Design Creativity* John S. Gero, 2014-11-09 Creativity and design creativity in particular are being recognized as playing an increasing role in the social and economic wellbeing of a society As a consequence creativity is becoming a focus of research However much of this burgeoning research is distributed across multiple disciplines that normally do not intersect with each other and researchers in one discipline are often unaware of related research in another discipline This volume brings together contributions from design science computer science cognitive science and neuroscience on studying visual and spatial reasoning applicable to design creativity The book is the result of a unique NSF funded workshop held in Aix en Provence France The aim of the workshop and the resulting volume was to allow researchers in disparate disciplines to be exposed to the other s research research methods and research results within the context of design creativity Fifteen of the papers presented and discussed at the workshop are contained in this volume The contributors come from Germany Israel Netherlands Poland Singapore UK and USA indicating the international spread of the research presented in this volume

**Analysing Design Thinking: Studies of Cross-Cultural Co-Creation** Bo Christensen, Linden J. Ball, Kim Halskov, 2017-08-03 The scientific analysis of design thinking continues to burgeon and is of considerable interest to academic scholars and design practitioners across many disciplines This research tradition has generated a growing corpus of studies concerning how designers think during the creation of innovative products although less focus has been given to analysing how designers think when creating less tangible deliverables such as concepts and user insights *Analysing Design Thinking Studies of Cross Cultural Co Creation* brings together 28 contributions from internationally leading academics with a shared interest in design thinking who take a close look at professional designers working on a project that not only involves soft deliverables but where a central role is played by co creation across multiple culturally diverse stakeholders This collection of detailed multi method analyses gives a unique insight into how a Scandinavian design team tackled a specific design task within the automotive industry over a four month design process All papers draw upon a common video based dataset and report analyses that link together a diversity of academic disciplines including psychology anthropology linguistics philosophy architecture management engineering and design studies The dataset affords multiple entry points into the analysis of design thinking with the selected papers demonstrating the application of a wide range of analytic techniques that generate distinct yet complementary insights Collectively these papers provide a coherent framework for analysing and interpreting design thinking in vivo through video based field studies

Active Learning in College Science Joel J. Mintzes, Emily M. Walter, 2020-02-23 This book explores evidence based practice in college science teaching. It is grounded in disciplinary education research by practicing scientists who have chosen to take Wieman's 2014 challenge seriously and to investigate claims about the efficacy of alternative strategies in college science teaching. In editing this book we have chosen to showcase outstanding cases of exemplary practice supported by solid evidence and to include practitioners who offer models of teaching and learning that meet the high standards of the scientific disciplines. Our intention is to let these distinguished scientists speak for themselves and to offer authentic guidance to those who seek models of excellence. Our primary audience consists of the thousands of dedicated faculty and graduate students who teach undergraduate science at community and technical colleges, 4 year liberal arts institutions, comprehensive regional campuses and flagship research universities. In keeping with Wieman's challenge, our primary focus has been on identifying classroom practices that encourage and support meaningful learning and conceptual understanding in the natural sciences. The content is structured as follows: after an Introduction based on Constructivist Learning Theory, Section I the practices we explore are Eliciting Ideas and Encouraging Reflection; Section II Using Clickers to Engage Students; Section III Supporting Peer Interaction through Small Group Activities; Section IV Restructuring Curriculum and Instruction; Section V Rethinking the Physical Environment; Section VI Enhancing Understanding with Technology; Section VII and Assessing Understanding; Section VIII. The book's final section IX is devoted to Professional Issues facing college and university faculty who choose to adopt active learning in their courses. The common feature underlying all of the strategies described in this book is their emphasis on actively engaging students who seek to make sense of natural objects and events. Many of the strategies we highlight emerge from a constructivist view of learning that has gained widespread acceptance in recent years. In this view, learners make sense of the world by forging connections between new ideas and those that are part of their existing knowledge base. For most students, that knowledge base is riddled with a host of naïve notions, misconceptions and alternative conceptions they have acquired throughout their lives. To a considerable extent, the job of the teacher is to coax out these ideas to help students understand how their ideas differ from the scientifically accepted view, to assist as students restructure and reconcile their newly acquired knowledge and to provide opportunities for students to evaluate what they have learned and apply it in novel circumstances. Clearly, this prescription demands far more than most college and university scientists have been prepared for.

**Block Parties** Daniel Ness, 2021-07-25 *Block Parties* examines young children's spatial development through the lens of emergent STEAM thinking.
