**Neurosurgery** William Sharpe, Norman Sharpe, 1928    *Neurological and Neurosurgical Intensive Care* Allan H. Ropper, 1988    Clinical Anesthesia in Neurosurgery Elizabeth A. M. Frost, 1991 Clinical Anesthesia in Neurosurgery Second Edition integrates the evolution of the field of neuroanesthesia with the major areas of neurosurgical activity to give the reader the required perspective and requisite information to help in laying the foundation for future advances as well as describing the current state of the art. The book contains 25 chapters organized into five parts. Part I presents studies on cerebral physiology and evaluation. Topics covered include cerebral circulation and metabolism, intraoperative neurophysiologic monitoring and central nervous system effects of anest.

**Journal of Neurosurgery**, 1987    *Surgical Nuances of Head Injury* Anoop Singh, 2024-01-10. Fundamental techniques and novel approaches for traumatic head injuries. *Surgical Nuances of Head Injury* is the first of its kind entirely dedicated to the technical aspect of head injury related surgeries. This book uniquely compiles all the basic neurosurgical steps for management of head injuries and includes exemplary case studies of both common as well as uncommon scenarios of a variety of head injuries. This book is an innovative concept between a text and an atlas, mentioning all necessary details through stunning surgical photos and detailing the surgeries with a step by step approach. With an equal emphasis on the basics and advancements, the authors have tried to correlate the clinical approach and technological help whenever required. All the chapters have clear surgical descriptions of conventional and situational case scenarios to help neurosurgeons make decisions in complex trauma cases. Through these interwoven concepts, the neurosurgery leaders intend to offer an easy solution to the readers and help them avoid confusion in tricky situations in an era of high speed trauma. Key Points: The Principle of Management of the Layers is the concept behind respecting each layer while approaching from skin to the brain and is the book's central theme which may bring the complication rates to the lowest possible extent in trauma and conventional surgeries. Many new surgical techniques have been described for the first time in this book such as the four hand technique, sizeable temporalis pericranium loose areolar tissue graft harvesting, among others. Cranial nerve and vascular injuries, the least discussed domains of neurotrauma have been purposefully added in this book to increase an awareness among the neurosurgical fraternity. These sections have been authored by world renowned experts in this field. This print book includes complimentary access to a digital copy on <https://medone.thieme.com>
