Xml Databases And The Semantic Web:

XML Databases and the Semantic Web Bhavani Thuraisingham, 2002-03-27 Efficient access to data sharing data extracting information from data and making use of the information have become urgent needs for today's corporations. With so much data on the Web, managing it with conventional tools is becoming almost impossible. New tools and techniques are necessary to provide interoperability as well as warehousing between XML Databases and the Semantic Web Bhavani M. Thuraisingham, 2002

The Semantic Web Michael C. Daconta, Leo J. Obrst, Kevin T. Smith, 2003-07-07 The Semantic Web is an extension of the current Web in which information is given well-defined meaning, better enabling computers and people to work in cooperation. Tim Berners-Lee, Scientific American, May 2001. This authoritative guide shows how the Semantic Web works technically and how businesses can utilize it to gain a competitive advantage. The Emerging Semantic Web Isabel F. Cruz, 2002 The Semantic Web is a Web defined and linked in a way that it can be used by machines not just for display purposes but also for automation integration and reuse of data across various applications This work presents technologies that will enable the Semantic Web to become a reality Uncertain Spatiotemporal Data Management for the Semantic Web Bai, Luyi, Zhu, Lin, 2024-03-01 In the world of data management one of the most formidable challenges faced by academic scholars is the effective handling of spatiotemporal data within the semantic web As our world continues to change dynamically with time nearly every aspect of our lives from environmental monitoring to urban planning and beyond is intrinsically linked to time and space This synergy has given rise to an avalanche of spatiotemporal data and the pressing question is how to manage model and query this voluminous information effectively The existing approaches often fall short in addressing the intricacies and uncertainties that come with spatiotemporal data

leaving scholars struggling to unlock its full potential Uncertain Spatiotemporal Data Management for the Semantic Web is the definitive solution to the challenges faced by academic scholars in the realm of spatiotemporal data This book offers a visionary approach to an all encompassing guide in modeling and querying spatiotemporal data using innovative technologies like XML and RDF Through a meticulously crafted set of chapters this book sheds light on the nuances of spatiotemporal data and also provides practical solutions that empower scholars to navigate the complexities of this domain effectively

Management and Query Processing in Semantic Web Databases Sven Groppe, 2011-04-29 The Semantic Web which is intended to establish a machine understandable Web is currently changing from being an emerging trend to a technology used in complex real world applications A number of standards and techniques have been developed by the World Wide Web Consortium W3C e g the Resource Description Framework RDF which provides a general method for conceptual descriptions for Web resources and SPARQL an RDF querying language Recent examples of large RDF data with billions of facts include the UniProt comprehensive catalog of protein sequence function and annotation data the RDF data extracted from Wikipedia

and Princeton University's WordNet. Clearly, querying performance has become a key issue for Semantic Web applications. In his book, Groppe details various aspects of high performance Semantic Web data management and query processing. His presentation fills the gap between Semantic Web and database books which either fail to take into account the performance issues of large scale data management or fail to exploit the special properties of Semantic Web data models and queries. After a general introduction to the relevant Semantic Web standards, he presents specialized indexing and sorting algorithms, adapted approaches for logical and physical query optimization, optimization possibilities when using the parallel database technologies of today's multicore processors, and visual and embedded query languages. Groppe primarily targets researchers, students, and developers of large scale Semantic Web applications. On the complementary book webpage, readers will find additional material such as an online demonstration of a query engine and exercises and their solutions that challenge their comprehension of the topics presented.

The Semantic Web-ISWC ..., 2005 **Building Trustworthy Semantic Webs** Bhavani Thuraisingham, 2007-12-05. Semantic Webs promise to revolutionize the way computers find and integrate data over the Internet. They will allow Web agents to share and reuse data across applications, enterprises, and community boundaries. However, this improved accessibility poses a greater threat of unauthorized access which could lead to the malicious corruption of information.

Advances in Database Technology, 2002 *Visualizing the Semantic Web* Vladimir Geroimenko, Chaomei Chen, 2006-07-01. The Semantic Web is a vision that has sparked a wide ranging enthusiasm for a new generation of the Web. The Semantic Web is happening. The central idea of that vision is to make the Web more understandable to computer programs so that people can make more use of this gigantic asset. The use of metadata, data about data, can clearly indicate the meaning of data on the Web so as to provide computers enough information to handle such data. On the future Web, many additional layers will be required if we want computer programs to handle the semantics, the meaning of data, properly without human intervention. Such layers should deal with the hierarchical relationships between meanings, their similarities and differences, logical rules for making new inferences from the existing data and metadata, and so on. Dozens of new technologies have emerged recently to implement these ideas. XML, eXtensible Markup Language, forms the foundation of the future Web. RDF, Resource Description Framework, OWL, Web Ontology Language, and many other technologies help to erect a multistory building of the Semantic Web layer by layer by adding new

features and new types of metadata According to Tim Berners Lee the inventor of the current Web and the Semantic Web it may take up to ten years to complete the building The new Web will be much more complex than the current one and will contain enormous amounts of metadata as well as data
