to use but it's not the best choice for everyone and even if you do use Time Machine you'll certainly want to supplement it with other tools. You'll learn about key features to look for in a backup app and find tips on using several popular tools. You'll also discover the pros and cons of cloud backup services and get help choosing the right one. An online appendix covers dozens of apps and services. Shop for hardware. Depending on your needs and goals you may need one or more external SSDs or hard drives but the range of options sizes, interfaces, speeds and more can be bewildering. Joe helps you find the best backup hardware whether it's individual SSDs or hard drives, RAIDs, NAS devices or other options. Make and maintain backups. Once you've selected hardware and software you'll need to know how to make your first backup, set up your backups to run unattended and test them regularly to make sure they're working as they should. This includes both versioned backups which contain old file versions and deleted files and for some users bootable or non-bootable data only clones. And you'll learn about strategies for keeping extra backups offsite. Operate Time Machine. If you choose Time Machine for versioned backups you'll learn how to back up and restore individual files and even an entire disk. You'll also discover why and how to encrypt Time Machine backups, how APFS snapshots work inside and outside Time Machine and what to do if Time Machine misbehaves. Deal with unusual backup needs. If you deal with exceptionally large files such as audio and video files, spend a lot of time on the road away from your usual backup hardware, run Windows on your Mac or rely on cloud services to store essential data you'll want to take extra or different steps to make sure everything is safely backed up. You'll also learn various approaches to backing up and restoring data from Apple's Notes app. Manage your media. What happens when a backup drive fills up or becomes so old that you worry about its future reliability? What if you want to archive older files for posterity but not necessarily maintain them as part of your daily backups? Joe explains how to deal with media management tasks such as these. Recover lost data. Backing up data can be easy but restoring it is often more challenging. When you discover that data is missing whether due to a disk error, theft or a simple mistake you need to know the exact steps needed to recover it and get back to work as soon as possible.

[Tidy Finance with Python](#) Christoph

Scheuch, Stefan Voigt, Patrick Weiss, Christoph Frey, 2024-07-12 This textbook shows how to bring theoretical concepts from finance and econometrics to the data. Focusing on coding and data analysis with Python we show how to conduct research in empirical finance from scratch. We start by introducing the concepts of tidy data and coding principles using pandas, numpy, and plotnine. Code is provided to prepare common open source and proprietary financial data sources CRSP, Compustat, Mergent, FISD, TRACE, and organize them in a database. We reuse these data in all the subsequent chapters which we keep as self-contained as possible. The empirical applications range from key concepts of empirical asset pricing, beta estimation, portfolio sorts, performance analysis, Fama French factors, to modeling and machine learning applications: fixed effects estimation, clustering, standard errors, difference in difference estimators, ridge regression, Lasso, Elastic net, random forests, neural networks, and portfolio optimization techniques. Key Features: Self-contained chapters on the most important applications and methodologies in finance which can easily be used for the reader's research or as a reference for courses on empirical finance. Each chapter is reproducible in the sense that the reader can replicate every single figure, table, or number by simply copying and pasting the code we provide. A full-fledged introduction to machine learning with scikit-learn based on tidy principles to show how factor selection and option pricing can benefit from Machine Learning methods. We show how to retrieve and prepare the most important datasets in financial economics: CRSP and Compustat, including detailed explanations of the most relevant data characteristics. Each chapter provides exercises based on established lectures and classes which are designed to help students to dig deeper. The exercises can be used for self-studying or as a source of inspiration for teaching exercises.
