Money in the traditional sense died two decades ago with a single stroke of Richard Nixon's presidential pen. What followed was twenty years of a new economic disorder that began with soaring oil, gold, and real estate prices and continued with an unprecedented consumption binge by government agencies and the citizenry alike. In the twenty years of chaos we've seen the savings and loan industry collapse, the banking system become weaker, eclipsed by the economy of finance, and an entirely new global medium of exchange created that Kurtzman calls megabyte money. Most economists, Kurtzman argues, still don't know what or how it all happened. Megabyte money is different from anything that has preceded it and from the money jingling in your pocket or purse. It is part of an intricate and fragile electronic system of truly global dimensions and of amazing complexity. It is a nonstop, seven-day-a-week, 24-hour network that links tens of thousands of computers in places as lofty as the Federal Reserve and the Tokyo Stock Exchange and as lowly as the automated gasoline pump that accepts credit cards. Megabyte money has created an entirely new global economy, one which Kurtzman warns is still largely unregulated, where government agencies, including the Federal Reserve and the Treasury, have ceded much power to the world's bankers, speculators, corporate treasurers, financiers, and computer programmers. In *The Death of Money*, Kurtzman vividly explains how this new megabyte economy enables brokers to electronically bundle up your home mortgage with dozens of others, convert them into jumbo securities like a bond, and sell those securities to investors in Germany or Japan. In the new megabyte economy, Nobel Prize-winning equations are programmed into the computers at mutual fund companies, and mathematicians, physicists, and even rocket scientists are replacing the stock pickers of the past. In the megabyte economy, money is nothing more than the 1's and 0's of the computer's code. Moving instantly along electronic highways, 1.9 trillion changes hands each day in New York alone. Information, even wrong or incomplete information, instantly affects prices around the world. The death of money has created a strange new world; most people have little knowledge of it. It is a world that is far more volatile and chaotic than anything that has preceded it. Though this new world economic order evolved without a plan, Kurtzman warns that efficient new mechanisms must now be put into place to bring the economy under control. If we do so, he says, the vast productive resources of our nation can again serve our needs.
