The Bulletproof Diet Dave Asprey, 2014-12-02 In his midtwenties Dave Asprey was a successful Silicon Valley multimillionaire. He also weighed 300 pounds despite the fact that he was doing what doctors recommended: eating 1,800 calories a day and working out 90 minutes a day six times a week. When his excess fat started causing brain fog and food cravings sapped his energy and willpower, Asprey turned to the same hacking techniques that made his fortune to hack his own biology: investing more than \$300,000 and 15 years to uncover what was hindering his energy, performance, appearance, and happiness. From private brain EEG facilities to remote monasteries in Tibet through radioactive brain scans, blood chemistry work, nervous system testing, and more, he explored traditional and alternative technologies to reach his physical and mental prime. The result: *The Bulletproof Diet*, an anti-inflammatory program for hunger-free, rapid weight loss and peak performance. *The Bulletproof Diet* will challenge and change the way you think about weight loss and wellness. You will skip breakfast, stop counting calories, eat high levels of healthy saturated fat, work out and sleep less, and add smart supplements. In doing so, you'll gain energy, build lean muscle, and watch the pounds melt off. By ditching traditional diet thinking, Asprey went from being overweight and sick in his twenties to maintaining a 100-pound weight loss, increasing his IQ, and feeling better than ever in his forties. *The Bulletproof Diet* is your blueprint to a better life.

Summary of Mark Rippetoe & Jason Kelly's Starting Strength

Everest Media,2022-03-04T22:59:00Z Please note This is a companion version not the original book Sample Book Insights 1 Humans are not physically normal in the absence of hard physical effort Exercise is not a thing we do to fix a problem but a thing we must do anyway It is the thing we must do to replicate the conditions under which our bodies are adapted the conditions under which we are physically normal 2 The first piece of equipment developed to assist with resistance training was the barbell which is a metal shaft with some sort of weight on each end The earliest barbells used spheres or globes for weight which could be adjusted for balance and load by filling them with sand or shot 3 The same principle applies to exercise machines as it does to gravity if you train your body in ways that it doesn t use you won t get any benefit from it The human body functions as a system and it gains strength in a manner that is similar to how it uses that strength 4 Barbells and their exercises are far superior to any other training tools that have ever existed They allow weight to be moved in the way the body was designed to move it and every aspect of the movement is controlled by the trainee
