Statistical Analysis for Public and Nonprofit Managers Leanna Stiefel, 1990-02-28 Designed for use by professionals and graduate level students in public administration and not for profit management this is a comprehensive clearly written guide to the use of statistical analysis in the management of nonprofit organizations The volume emphasizes statistical models that use more than one variable and is unique in presenting multivariate statistics specifically with the public and nonprofit manager in mind Examples throughout have been chosen to be relevant to the not for profit organization and each chapter contains several real life illustrations of how statistical techniques can be used in actual practice In addition to explaining statistical methods and techniques in detail the author focuses on why statistics should be used and helps the reader obtain an intuitive grasp of the rationale behind the statistics Because she stresses the logic of proofs and the limitations of results rather than the pure mathematics of statistical derivation the volume is accessible to students and managers with only a little statistical background Following a chapter that introduces the concept of multivariate analysis Stiefel explains simple and multiple regression models in detail Later chapters discuss other techniques that are becoming widely used in not for profit organizations logit and probit analysis time series models and simultaneous equation models Two types of examples are used to make the material immediately relevant to the not for profit manager real world examples culled from professional journals and reports in a variety of fields including health care education finance budgeting and administrative science and examples of results obtained using statistical programs run on a personal computer Thus the book enables the reader to understand and interpret both the statistics used in professional articles and statistical results as they appear on computer printouts Four appendixes review basic statistical methods such as simple summation operators the Pearson Correlation Coefficient and hypothesis testing for the sample mean

Performance Analysis for Public and Nonprofit Organizations XiaoHu Wang, 2010 The book focuses on application of performance analysis tools not the theory of performance management This text is an effective learning tool for students in analytical technique courses in public administration and policy programs With other texts students may learn about a statistical concept and calculation but still don't understand the managerial context where the statistical tool applies Consequently they often fail to understand the managerial importance of statistical tools they learn and worse fail to recognize the correct tool to use when a managerial issue rises This book corrects this problem by providing a managerial context that bridges statistical concepts and the managerial reality The managerial context is performance management in which performance data are presented monitored and analyzed It is in this performance management context that the usefulness and applicability of statistical tools are illuminated for the learner
