## **Statistical Rethinking McElreath:**

*Statistical Rethinking* Richard McElreath, 2018-01-03 *Statistical Rethinking A Bayesian Course with Examples in R and Stan* builds readers knowledge of and confidence in statistical modeling Reflecting the need for even minor programming in today s model based statistics the book pushes readers to perform step by step calculations that are usually automated This unique computational approach ensures that readers understand enough of the details to make reasonable choices and interpretations in their own modeling work The text presents generalized linear multilevel models from a Bayesian perspective relying on a simple logical interpretation of Bayesian probability and maximum entropy It covers from the basics of regression to multilevel models The author also discusses measurement error missing data and Gaussian process models for spatial and network autocorrelation By using complete R code examples throughout this book provides a practical foundation for performing statistical inference Designed for both PhD students and seasoned professionals in the natural and social sciences it prepares them for more advanced or specialized statistical modeling Web Resource The book is accompanied by an R package rethinking that is available on the author s website and GitHub The two core functions map and map2stan of this package allow a variety of statistical models to be constructed from standard model formulas

**Statistical Rethinking** Richard McElreath, 2020-03-13 Winner of the 2024 De Groot Prize awarded by the International Society for Bayesian Analysis ISBA *Statistical Rethinking A Bayesian Course with Examples in R and Stan* builds your knowledge of and confidence in making inferences from data Reflecting the need for scripting in today s model based statistics the book pushes you to perform step by step calculations that are usually automated This unique computational approach ensures that you understand enough of the details to make reasonable choices and interpretations in your own modeling work The text presents causal inference and generalized linear multilevel models from a simple Bayesian perspective that builds on information theory and maximum entropy The core material ranges from the basics of regression to advanced multilevel models It also presents measurement error missing data and Gaussian process models for spatial and phylogenetic confounding The second edition emphasizes the directed acyclic graph DAG approach to causal inference integrating DAGs into many examples The new edition also contains new material on the design of prior distributions splines ordered categorical predictors social relations models cross validation importance sampling instrumental variables and Hamiltonian Monte Carlo It ends with an entirely new chapter that goes beyond generalized linear modeling showing how domain specific scientific models can be built into statistical analyses Features Integrates working code into the main text Illustrates concepts through worked data analysis examples Emphasizes understanding assumptions and how assumptions are reflected in code Offers more detailed explanations of the mathematics in optional sections Presents examples of using the dagitty R package to analyze causal graphs Provides the rethinking R package on the author s website and on GitHub
