

## Solution:

### Steps:

1. Find the probability of each independent event.
2. Multiply the probabilities of each event.

- P (green and red)

$$P(\text{green}) = \frac{1}{12}$$

1 green marble

12 total marbles in the sample space

$$P(\text{red}) = \frac{5}{12}$$

5 red marbles

12 marbles in the sample space

$$P(\text{green and red}) = \frac{1}{12} \cdot \frac{5}{12} = \frac{5}{144}$$

The probability of choosing a green marble and then a red marble is 5/144 which is 3.5% chance.

**Fifty Challenging Problems in Probability with Solutions** Frederick Mosteller, 2012-04-26 Remarkable puzzlers graded in difficulty illustrate elementary and advanced aspects of probability These problems were selected for originality general interest or because they demonstrate valuable techniques Also includes detailed solutions Statistics E. E. Bassett, 2000 What is most valuable about this book is the very high quality of the model solutions It is a problem book for those teaching or learning a first course in mathematical statistics This one is outstandingly good and highly recommended Goeff Cohen University of Edinburgh Scotland The authors of this useful book take the view that the ability to solve practical problems is fundamental to an understanding of statistical techniques The book is designed to be read alongside a standard text I expect it is likely to be most useful to the teacher or to the able student forced to work largely alone David Green This book not only provides a solution to each problem set but gives notes about that solution These notes should help students to understand the reasoning behind the techniques used so giving them confidence to deal with problems of a similar nature This book should prove a valuable addition to the library of students and teachers of statistics M J G Ansell Hatfield Polytechnic The book consists of a series of examples each followed by one or more alternative solutions and accompanying notes The solutions themselves are useful models The notes go one stage further and explain why particular techniques were chosen to solve each problem This approach may help to overcome the common difficulty of deciding which method to choose when answering examination questions The book is easy to read and suitable for individual study Richard J Field These notes provide fascinating insights into the process that experienced statisticians go through in order to solve a problem Students and maybe some instructors will benefit greatly from going through the solutions and the notes in this book Gudmund R Iversen Swarthmore College The approach of the authors is to improve a student's understanding of statistics and to help students appreciate which techniques might be appropriate for any problem Zentralblatt Math 2001 Probability Problems and Solutions Stefan Hollos, J. Richard Hollos, 2013-04 This book will help you learn probability in the most effective way possible through problem solving It contains over 200 problems in discrete probability with detailed solutions for each Most of the problems require very little mathematical background to solve A good grasp of algebra is all that is required Some prior exposure to probability or combinatorics will make things easier but the book has enough introductory material to cover any deficiency in those areas There are sections that review the basics of discrete probability and combinatorics There are also sections on advance topics in discrete probability that are helpful in solving the more difficult and interesting problems The problems range widely in difficulty and variety They begin very easy and increase in difficulty as you go The first few are warm up problems to wake up your probability neurons and get you ready for what's to come Some of the later problems can be quite challenging and may take some effort to solve There are problems on letters and words dice and coin problems card problems sports problems Bayesian problems collection problems birthday problems and many many more The almost
