## **Statistics Through Applications:**

Statistics Through Applications Daren S. Starnes, David S. Moore, Dan Yates, 2009-12-25 Watch a video introduction here Statistics Through Applications STA is the only text written specifically for high school statistics course. Designed to be read the book takes a data analysis approach that emphasizes conceptual understanding over computation while recognizing that some computation is necessary. The focus is on the statistical thinking behind data gathering and interpretation. The high school statistics course is often the first applied math course students take. STA engages students in learning how statisticians contribute to our understanding of the world and helps students to become more discerning consumers of the statistics they encounter in ads, economic reports, political campaigns, and elsewhere. New and improved STA 2e features expanded coverage of probability, a reorganized presentation of data analysis, a new color design, and much more. Please see the posted sample chapter or request a copy today to see for yourself.

Starnes, Nancy Crisler, 2004-03-01 **Statistics Through Applications** Dan Yates, Daren S. Starnes, David S. Moore, 2004-03 The NCTM urges the study of statistics in high school and many schools have designed courses based on these NCTM recommendations. Now from the authors of the overwhelming favorite for the AP Statistics course, *The Practice of Statistics* comes the first text written exclusively for a non AP level high introduction to statistics for high school students. *Statistics Through Applications* is the ideal alternative for juniors and seniors not going into high level courses such as calculus but who are interested in an introduction to the important topics of statistics. The book's data analysis approach moves students away from monotonous computation to focus on the statistical thinking behind data gathering and interpretation. This approach more accurately reflects the way working statisticians contribute to our understanding of the world. It also helps students be more discerning consumers of statistics, teaching them to look closely at what the numbers from surveys, election polls, and medical studies are really saying.
