Metacognition in Learning

Nosisi Feza,2019-12-11 Metacognition skills have been proven to have a positive relationship with learning The strength of metacognition relies heavily on self efficacy where a student understands his her learning style and the ability to use information gathered and align it with his her learning style In addition knowing what you know and how you know it as a student plays a huge role in knowing what you do not know and linking it with what is close or relevant to it that you know It is about having skills and knowledge that empowers you to be an independent learner Literature on classroom practices show a number of short comings in diverse areas such as poor teacher knowledge overcrowded classrooms and lack of resources for learning An independent student will strive under such an environment by studying independently searching for resources and finding multimodal ways of learning It is also important to note that naturally human beings are curious and want to learn in order to conquer their world Hence Piaget s work of intellectual autonomy cannot be ignored when exploring metacognition If learning experiences were ideal and developmental they would be no need to nurture metacognition Unfortunately the education systems remove students curiosity by bringing fake environments into learning that impede creation and imagination This book emphasises the power of metacognition at different levels of learning It can be seen as a parallel intervention approach with expanded knowledge on how to extend existing skills for young children which is a pre intervention Authors in this book bring diverse viewpoints from diverse fields on how to nurture metacognition thus giving the reader an opportunity to borrow strategies from other fields This contribution is a mixture of empirical contributions and opinion pieces informed by review of literature *Journal of Education* ,1891 **Investigating Light and Shadow With Young Children (Ages 3-8)** Beth Dykstra Van Meeteren,2022 Children are intrigued by switches that

power a light source and by items that reflect light and sparkle and they take notice of personal shadows cast on the playground Many fields in STEM draw upon understanding of light and shadow such as astronomy biology engineering architecture and more This second volume in the STEM for Our Youngest Learners Series shows teachers how to engage children ages 3-8 with light and shadow in a playful way building an early foundation for the later more complex study of this phenomena and possibly piquing the curiosity of children that will ultimately lead to professions within the field of STEM The text offers guidance for integrating literacy learning and investigations and for building partnerships with administrators Each volume in this new series includes vignettes showing educators and children engaging in inquiry learning guidance for selecting materials and arranging the learning environment modifications and accommodations for diverse learners establishing adult learning communities to support professional development and more *Picture-perfect STEM Lessons, Grade 2* Karen Rohrich Ansberry, Emily Rachel Morgan, 2023 There's a lot to love about this newly expanded book in the Picture Perfect Science series You can combine STEM and reading through lively lessons that are just right for your second grade students Also reading comprehension strategies are embedded in all 12 of the ready to teach lessons The goal is to help your young scientists learn to read and read to learn while engaging in activities that blend science technology engineering and mathematics *The New Practical Reference Library* Charles Herbert Sylvester, Ellsworth D.
