with the aim of making these techniques accessible to music scholars without extensive prior training in mathematics. The book adopts a visual orientation introducing from the outset a number of simple geometric models, the first examples of the musical spaces of the book's title depicting relationships among musical entities of various kinds such as notes, chords, scales, or rhythmic values. These spaces take many forms and become a unifying thread in initiating readers into several areas of active recent scholarship including transformation theory, neo-Riemannian theory, geometric music theory, diatonic theory, and scale theory. Concepts and techniques from mathematical set theory, graph theory, group theory, geometry, and topology are introduced as needed to address musical questions. Musical examples ranging from Bach to the late twentieth century keep the underlying musical motivations close at hand. The book includes hundreds of figures to aid in visualizing the structure of the spaces as well as exercises offering readers hands-on practice with a diverse assortment of concepts and techniques.

Simulation and Computational Red Teaming for Problem Solving Jiangjun Tang, George Leu, Hussein A.

Abbass, 2019-10-24 An authoritative guide to computer simulation grounded in a multi-disciplinary approach for solving complex problems. *Simulation and Computational Red Teaming for Problem Solving* offers a review of computer simulation that is grounded in a multi-disciplinary approach. The authors present the theoretical foundations of simulation and modeling paradigms from the perspective of an analyst. The book provides the fundamental background information needed for designing and developing consistent and useful simulations. In addition to this basic information, the authors explore several advanced topics. The book's advanced topics demonstrate how modern artificial intelligence and computational intelligence concepts and techniques can be combined with various simulation paradigms for solving complex and critical problems. Authors examine the concept of Computational Red Teaming to reveal how the combined fundamentals and advanced techniques are used successfully for solving and testing complex real-world problems. This important book demonstrates how computer simulation and Computational Red Teaming support each other for solving complex problems. Describes the main approaches to modeling real-world phenomena and embedding these models into computer simulations. Explores how a number of advanced artificial intelligence and computational intelligence concepts are used in conjunction with the fundamental aspects of simulation. Written for researchers and students in the computational modelling and data analysis fields. *Simulation and Computational Red Teaming for Problem Solving* covers the foundation and the standard elements of the process of building a simulation and explores the simulation topic with a modern research approach. **Educart**
