Kumar,2024-04-22 This book emphasizes recent developments in the use of mutation technologies for crop plant  
improvement and ultimately sustainable development Plant breeders use genetic variation which is created by plant induced  
mutation to create new and improved cultivars The development of improved cultivars is a productive and optimistic  
agricultural strategy for economic and environmental sustainability since it ensures high yield stability enhances soil health  
and poses no environmental risks Understanding mutation induction and exploring its uses have paved the road for  
improving genetic diversity for different plants and agronomic features and advanced gene discovery for diverse qualities  
that aid in sustainable development Plant mutation breeding imitates spontaneous mutation the primary force driving  
evolution by using a plant s own genetic resources instead of genetic transformation In order to develop beneficial  
agricultural features this strategy focuses on the application of various chemical and physical mutagens in conjunction with  
biotechnologies In order to survive in challenging environments increase nutritional value fight diseases and pests grow in  
salty soils and utilize water and nutrients more effectively new varieties of plants are developed This approach has  
significantly boosted the economies of nations like China India Japan Pakistan and the USA As of right now the strategy has  
produced and disseminated more than 3600 mutant types in the majority of crop plants having a significant economic impact  
This book discusses several mutation induction techniques mutant screening genome editing the haploid breeding system for  
mutations as well as genomic developments and mutant gene identification Plant breeders researchers and students in the  
fields of plant sciences agriculture and food science will find this instructive book to be of great help      Flying Magazine
