The book promotes a diagnostic mode of thinking concerning error messages, better material definition and the writing of user material subroutines work with the Abaqus mesher and best practice in doing so the writing of user element subroutines and contact features with convergence issues and consideration of hardware and software issues and a Windows HPC cluster solution. The methods and information provided facilitate job diagnostics and help to obtain converged solutions for finite element models regarding structural component assemblies in static or dynamic analysis. The troubleshooting advice ensures that these solutions are both high quality and cost effective according to practical experience. The book offers an in depth guide for students learning about Abaqus as each problem and solution are complemented by examples and straightforward explanations.
