Semiconductors Artur Balasinski, 2018-09-03 Because of the continuous evolution of integrated circuit manufacturing ICM and design for manufacturability DfM most books on the subject are obsolete before they even go to press That's why the field requires a reference that takes the focus off of numbers and concentrates more on larger economic concepts than on technical details Semiconductors Integrated Circuit Design for Manufacturability covers the gradual evolution of integrated circuit design ICD as a basis to propose strategies for improving return on investment ROI for ICD in manufacturing Where most books put the spotlight on detailed engineering enhancements and their implications for device functionality in contrast this one offers among other things crucial valuable historical background and roadmapping all illustrated with examples Presents actual test cases that illustrate product challenges examine possible solution strategies and demonstrate how to select and implement the right one This book shows that DfM is a powerful generic engineering concept with potential extending beyond its usual application in automated layout enhancements centered on proximity correction and pattern density This material explores the concept of ICD for production by breaking down its major steps product definition design layout and manufacturing Averting extended discussion of technology techniques or specific device dimensions the author also avoids the clumsy chapter architecture that can hinder other books on this subject The result is an extremely functional systematic presentation that simplifies existing approaches to DfM outlining a clear set of criteria to help readers assess reliability functionality and yield With careful consideration of the economic and technical trade offs involved in ICD for manufacturing this reference addresses techniques for physical electrical and logical design keeping coverage fresh and concise for the designers manufacturers and researchers defining product architecture and research programs

Hyperscale Revenue Jim Christen, 2025-11-11 Redefine Revenue Growth in Your Organization Revenue is the engine behind every decision your company makes forming the backbone of your business metrics It drives product innovation shapes go to market strategies and guides your hiring priorities At the heart of revenue lies the pipeline a crucial leading indicator built on meaningful high value interactions with decision makers Unlocking growth requires cultivating a pipeline acceleration mindset across your entire organization More importantly success hinges on fostering accountability through precise measurement and well structured cadences Yet many organizations lack a fully integrated sales operating system one specifically designed to navigate the complexities of today's enterprise environment If your revenue depends on the strength of your pipeline coverage why isn't it treated as a disciplined well defined practice Pipeline is a science while managing opportunities and closing deals is more of an art To achieve consistent scalable success you must fundamentally rethink your sales approach aligning strategy and execution with how today's buyers make decisions in high stakes complex environments The solution is both innovative and transformative blending creativity with discipline to reimagine your operating systems The real question is How far are you willing to go to ensure your company's growth and long term success The most effective

These transformative outcomes consistently redefine what's possible for revenue growth in leading organizations.

Compound Semiconductor, 2004 **Advanced Data Mining and Applications** Changjie Tang, Charles X. Ling, Xiaofang Zhou, Nick Cercone, Xue Li, 2008-09-30 The Fourth International Conference on Advanced Data Mining and Applications (ADMA 2008) will be held in Chengdu, China, followed by the last three successful ADMA conferences: 2005 in Wuhan, 2006 in Xian, and 2007 in Harbin. Our major goal of ADMA is to bring together the experts on data mining in the world and to provide a leading international forum for the dissemination of original research results in data mining, including applications, algorithms, software, and systems, and different disciplines with potential applications of data mining. This goal has been partially achieved in a very short time despite the young age of the conference, thanks to the rigorous review process insisted upon the outstanding list of internationally renowned keynote speakers and the excellent program. Each year, ADMA is ranked higher than or very similar to other data mining conferences such as PAKDD, PKDD, and SDM in early 2008 by an independent source, CS Conference Ranking Org. This year, we had the pleasure and honor to host illustrious keynote speakers. Our distinguished keynote speakers are Prof. Qiang Yang and Prof. Jiming Liu. Prof. Yang is a tenured Professor and postgraduate studies coordinator at Computer Science and Engineering Department of Hong Kong University of Science and Technology. He is also a member of AAAI, ACM, a senior member of the IEEE, and he is also an associate editor for the IEEE TKDE and IEEE Intelligent Systems, KAIS, and WI Journals.
