[A Simple Guide to Retrieval Augmented Generation](#) Abhinav Kimothi,2025-07-01 Everything you need to know about Retrieval Augmented Generation in one human friendly guide Augmented Generation or RAG enhances an LLM s available data by adding context from an external knowledge base so it can answer accurately about proprietary content recent information and even live conversations RAG is powerful and with A Simple Guide to Retrieval Augmented Generation it s also easy to understand and implement In A Simple Guide to Retrieval Augmented Generation you ll learn The components of a RAG system How to create a RAG knowledge base The indexing and generation pipeline Evaluating a RAG system Advanced RAG strategies RAG tools technologies and frameworks A Simple Guide to Retrieval Augmented Generation gives an easy yet comprehensive introduction to RAG for AI beginners You ll go from basic RAG that uses indexing and generation pipelines to modular RAG and multimodal data from images spreadsheets and more About the Technology If you want to use a large language model to answer questions about your specific business you re out of luck The LLM probably knows nothing about it and may even make up a response Retrieval Augmented Generation is an approach that solves this class of problems The model first retrieves the most relevant pieces of information from your knowledge stores search index vector database or a set of

documents and then generates its answer using the user's prompt and the retrieved material as context. This avoids hallucination and lets you decide what it says. About the Book: A Simple Guide to Retrieval Augmented Generation is a plain English guide to RAG. The book is easy to follow and packed with realistic Python code examples. It takes you from concept by concept from your first steps with RAG to advanced approaches exploring how tools like LangChain and Python libraries make RAG easy. And to make sure you really understand how RAG works, you'll build a complete system yourself, even if you're new to AI. What's Inside: RAG components and applications, Evaluating RAG systems, Tools and frameworks for implementing RAG. About the Readers: For data scientists, engineers, and technology managers, no prior LLM experience required. Examples use simple, well-annotated Python code. About the Author: Abhinav Kimothi is a seasoned data and AI professional. He has spent over 15 years in consulting and leadership roles in data science, machine learning, and AI and currently works as a Director of Data Science at Sigmoid. Table of Contents: Part 1: 1 LLMs and the need for RAG, 2 RAG systems and their design, Part 2: 3 Indexing pipeline: Creating a knowledge base for RAG, 4 Generation pipeline: Generating contextual LLM responses, 5 RAG evaluation: Accuracy, relevance, and faithfulness, Part 3: 6 Progression of RAG systems: Naïve, advanced, and modular RAG, 7 Evolving RAGOps stack, Part 4: 8 Graph, multimodal, agentic, and other RAG variants, 9 RAG development framework and further exploration.

Artificial Intelligence in Architecture and the Built Environment Michal Sourek, 2025-01-22. Imagine if every architect had an apprentice who could consistently observe and understand their intentions, take over routine tasks, and monitor technical, environmental, and economic constraints. This apprentice would continually improve, freeing the architect to concentrate on truly creative work. This book outlines a plan to turn this vision into reality. It evaluates the development of artificial intelligence from its inception to the present, focusing on the last two decades of applying AI in architectural design and planning. The current state of architectural practice is also examined. Integrating architecture, computer science, AI, robotics, economics, law, neurobiology, and philosophy, the vision is built on three key premises: i) authentic, poetic creativity that transcends parameterization and algorithmizing; ii) innovative learning strategies and training approaches not yet applied concerning architectural design; and iii) the convergence of architecture's inherent spatiality with virtual reality technology and new theories of human thinking and intelligence, poised for implementation in machine learning.
