Beginners Chapter 1 Introduction to AI Artificial Intelligence commonly referred to as AI is a branch of computer science that focuses on creating systems capable of performing tasks that would typically require human intelligence These tasks include problem solving understanding natural language recognizing patterns and making decisions At its core AI aims to develop machines that can mimic cognitive functions associated with the human mind This technology has evolved over the decades transitioning from theoretical concepts to practical applications that impact our daily lives One of the fundamental building blocks of AI is machine learning which allows computers to learn from data and improve their performance over time without being explicitly programmed This process involves feeding large amounts of data into algorithms which then identify patterns and make predictions based on that information For instance recommendation systems on streaming platforms analyze user behavior to suggest movies or shows that align with individual preferences This capability underscores how AI can enhance user experiences by personalizing interactions [Generative AI for Beginners](#) John Cook,2025-12-12 [Feel Left Behind by AI](#)
