By embracing genAI head on, the authors are potentially revolutionizing programming education. Through its integrative approach to the use and study of genAI, this book is positioned to be the leading book in modern Java and its applications. Indeed, I expect that it should be widely adopted by instructors who want to ingrain in their students an appreciation for the critical role that Java will play in data science, machine learning, artificial intelligence, and cybersecurity. The book's innovative and forward thinking use of genAI facilitates reader engagement and inspires readers to think critically about the benefits and limitations of AI as a programming aid. Chapter 19 could become everyone's favorite new Java book chapter. The generative AI API based code examples are interesting and fun. All audiences of this book should read the Preface; there's so much to get excited about. It demonstrates with refreshing transparency and honesty how much love and care went into the reinvention of an already outstanding Java book by bringing it into a new frontier of what it means to be a programmer in today's world. Bravo! Your Preface statement: "GenAI has created an ultra high level programming capability that will leverage your Java learning experience and ability to produce robust, top quality Java software quickly, conveniently and economically." is a great conclusion to the Preface. The intro really helps justify the use of genAI. Brian Canada, Professor of Computational
