advances in microscopy have been coupled with new methods of culturing and labeling cells to generate the new science of

imaging Imaging technologies allow investigators to look directly inside living cells and probe their form and function in

unprecedented detail This approach is revolutionizing many aspects of biomedical research particularly neuroscience in

which visual techniques have traditionally been so important This manual is the first comprehensive description of the range

of imaging technologies being applied to living cells With its origins in a laboratory course taught at Cold Spring Harbor

Laboratory by the editors and contributors it is packed with the kind of technical detail and practical advice that are essential

for success yet seldom found in the research literature It covers both established methods and cutting edge techniques such

as multiphoton excitation microscopy and imaging of genetically engineered probes Although it is neurons to which these

technologies are most commonly applied the methods described are readily adaptable to many other cell types This book will

therefore be an invaluable aid to investigators in cell and developmental biology and immunology as well as neuroscience

who wish to take advantage of the extraordinary insights into cellular function offered by imaging technologies

Microinjection and Transgenesis Angel Cid-Arregui,Alejandro Garcia-Carranca,1998 The technique of microinjection is used to transfer biological materials RNA proteins oligonucleotides and especially cloned genes into cultured somatic cells or
