[Emergent Bilingual Students and Their Academic Performance](#) John R. Slate, Clare A. Resilla, 2023-09-07 Emergent Bilinguals, formerly known as English Language Learners, are one of the fastest growing subgroups in the United States. Their educational needs are not well met by the educational system. In this book, we report results of empirical multiyear studies about their reading and mathematics performance both at the elementary school and high school levels. Given that state education agencies collect enormous amounts of information that are typically not well analyzed, this book serves as an exemplar of secondary data analyses. Educational leaders, educational researchers, and legislators and policymakers will find the chapters in this book useful. Findings from these statewide analyses can provide readers with baselines of the performance of Emergent Bilingual students prior to the Covid 19 pandemic in reading and in mathematics. Changes in instructional practices and in educational programming could be made based upon the numerous statistical results present in this book.

State Mandated Summer Programs in Texas Heather A. Jones, 2015 High stakes testing holds schools accountable for student performance. When students fail standardized tests, schools are held responsible for raising student scores. On May 31, 2014, ninth grade students in Texas took the STAAR English I End of Course exam. Of the over 350,000 students in the state who took the exam, 28 percent failed the combined reading and writing exam. Texas Education Agency, 2014. The state requires that school districts provide accelerated instruction for any student who fails to perform satisfactorily on an end of course assessment instrument required for graduation. HB5, 2013, p. 36. This accelerated instruction was offered by a large suburban school district in the form of a summer program in June of 2014 to prepare students for the

re test in July Summer programs have long been used by many districts to further students coursework and are now more frequently being used for test preparation However the research on the effectiveness of summer programs to increase test scores is inconclusive Therefore this study focused on whether or not one summer mandated program in Texas improved student test scores It also compared the summer program s curriculum and instructional strategies to the best practices of teaching reading and writing The study answered this research question Was there a significant difference between the July passing rates of the students who took the summer program Group A and the students who did not Group B The data was analyzed using an analysis of covariance ANCOVA to compare the difference in scores between the attendees N 390 and the non attendees N 257 Then the demographic subgroups were further analyzed using an ANCOVA to detect significant differences between and within the different groups It was found that attendance in the summer program had a significant effect on students retest scores Through further demographic analysis it was also found that economically disadvantaged attendees and non attendees had higher average scores as a group than the attendees as a whole Additionally the session a student attended AM PM had a significant effect on their retest score Through the comparison of the summer program curriculum to best practice it was found that the program used some best practice strategies but the majority of the strategies fell under the category of test preparation Interpretation of these results suggested that although the summer program appeared to help 60 percent of its attendees pass the retest it was not effective for the 40 percent of attendees who failed the exam a second time Also 47 percent of non attendees passed the exam on their second try without attending the summer program These results suggest that the summer program had limited educational significance
