**Mineral Dissolution Kinetics: New Perspectives** Victor W Truesdale, Jim E Greenwood, Tim G Southern, 2025-05-09

Mineral Dissolution Kinetics New Perspectives is at its core a search for a universal rate equation for mineral dissolution It documents and details the journey undertaken by its authors appealing not only to specialists and experts in related fields but also to novice readers seeking to learn more about this unique subject The book reveals how the compounding of many otherwise subtle misunderstandings has resulted in the underdevelopment of fundamental concepts in mineral dissolution kinetics despite its long history of study By examining a wide cross section of existing studies it uncovers these misunderstandings and forges a new way forward Although mineral dissolution kinetics has been immensely important in explaining continental weathering landform development and the maintenance of water supplies for agricultural and human use it remains a critically undervalued field of chemistry It is also foundational to our understanding of the marine environment and serves as an essential tool in the long term storage of CO<sub>2</sub> and radionuclide waste More recently it has helped address the human induced rise in tropospheric CO<sub>2</sub> a key cause of global warming and ocean acidification Complex

subjects such as the hydrodynamics of dissolution the thermodynamics of the aqueous carbonate system and central omissions at the very core of homogeneous kinetics are explained clearly and simply while still remaining at the cutting edge of the field    Official Gazette of the United States Patent and Trademark Office ,2002    Templates for Forest Sustainability on the Olympic Experimental State Forest Bruce R.
