## Bisectors of Triangles

**Perpendicular Bisectors** A perpendicular bisector is a line, segment, or ray that is perpendicular to the given segment and passes through its midpoint. Some theorems deal with perpendicular bisectors.

Perpendicular Bisector Theorem	If a point is on the perpendicular bisector of a segment, then it is equidistant from the endpoints of the segment.
Converse of Perpendicular Bisector Theorem	If a point is equidistant from the endpoints of a segment, then it is on the perpendicular bisector of the segment.
Circumcenter Theorem	The perpendicular bisectors of the sides of a triangle intersect at a point called the circumcenter that is equidistant from the vertices of the triangle.

**Example 1:** Find the measure of  $FM$ .

$FK$  is the perpendicular bisector of  $GM$ .

$$FG = FM$$

$$2x = x$$

**Exercises:**

Find each measure.

1.  $XW$

Point  $P$  is the circumcenter of  $\triangle EMNK$ . List any segment(s) congruent to each segment below.

3.  $MP \rightarrow PC$

5.  $MN \rightarrow NK$

4.  $KP \rightarrow NP$

6.  $ER \rightarrow RK$

**Example 2:**  $BD$  is the perpendicular bisector of  $AC$ . Find  $x$ .

$$AD = DC$$

$$3x + 8 = 5x - 6$$

$$14 = 2x$$

$$7 = x$$

2.  $BF$

Peter Hunter Computational physiology for the cardiovascular system is entering a new and exciting phase of clinical application Biophysically based models of the human heart and circulation based on patient specific anatomy but also informed by population atlases and incorporating a great deal of mechanistic understanding at the cell tissue and organ levels offer the prospect of evidence based diagnosis and treatment of cardiovascular disease The clinical value of patient specific modeling is well illustrated in application areas where model based interpretation of clinical images allows a more precise analysis of disease processes than can otherwise be achieved For example Chap 6 in this volume by Speelman et al deals with the very difficult problem of trying to predict whether and when an abdominal aortic aneurysm might burst This requires automated segmentation of the vascular geometry from magnetic resonance images and finite element analysis of wall stress using large deformation elasticity theory applied to the geometric model created from the segmentation The time varying normal and shear stress acting on the arterial wall is estimated from the arterial pressure and flow distributions Thrombus formation is identified as a potentially important contributor to changed material properties of the arterial wall Understanding how the wall adapts and remodels its material properties in the face of changes in both the stress loading and blood constituents associated with inflammatory processes IL6 CRP MMPs etc
