

Storms Unit – Lesson 1-7 – Study Guide

Assessment for storms will be divided into Parts A and B.

Part A. In this part of the assessment you will observe an investigation. You will be asked to describe what you see and tell why it is happening. You will be graded on your ability to record your observations and to apply what you are seeing to real-world storms.

Answer these questions to study for Part A:

1. What is a vortex, and what causes it to form?

Circulation of gas and liquids caused by:

- a. the uneven heating of the Earth's surfaces
- b. the force of gravity
- c. the rotation of the Earth

2. How does air above a heated surface move? Cold surface? **Warm air rises and cold air sinks.**

3. What happens when hot air meets cold air? **Storms may occur.**

Conditions are favorable for the formation of tornadoes.

4. How do hurricanes form? **Hurricanes form over moist, warm, tropical waters near the equator. The water cycle is the heart of hurricane formation.**

To study for Part B, answer these questions:

1. How are hurricanes and tornadoes alike? How are they different? **Tornadoes and hurricanes are alike because they are both spiraling storms and both can cause a severe amount of damage. They are different because tornadoes form over land, and hurricanes form over warm, tropical waters.**

2. What role does the sun play in the weather on the earth? **The interaction of solar energy with air, soil, and water on the earth creates wind, rain, and other elements of weather.**

3. What is a convection current?
