*A Collection of Performance Tasks and Rubrics* Charlotte Danielson, 1999 A collection of 20 class tested activities corresponding to K-3 math topics    [Performance Tasks and Rubrics for Early Elementary Mathematics](#) Pia Hansen, 2016-02-26 Performance tasks are highly effective tools to assist you in implementing rigorous standards. But how do you create, evaluate, and use such tools? In this bestselling book, educational experts Charlotte Danielson and Pia Hansen explain how to construct and apply performance tasks to gauge students' deeper understanding of mathematical concepts at the early elementary level. You'll learn how to evaluate the quality of performance tasks whether you've written them yourself or found them online. Use performance tasks for instructional decision making and to prepare students for summative assessments. Create your own performance tasks or adapt pre-made tasks to best suit students' needs. Design and use scoring rubrics to evaluate complex performance tasks. Use your students' results to communicate more effectively with parents. This must-have second edition is fully aligned to the Common Core State Standards and assessments and includes a variety of new performance tasks and rubrics, along with samples of student work. Additionally, downloadable student handout versions of all the performance tasks are available as free eResources from our website: [www.routledge.com/97811389069891](http://www.routledge.com/97811389069891) so you can easily distribute them to your class.

## **The Important Role of the Early School Years for Reading, Writing and Math**

**Development: Assessment and Intervention at School Entry** Christoph Weber, Martin Schöfl, Susanne Seifert, Natalie Förster, 2025-12-01 School entry is a critical life event for young children. Students begin this new phase of their lives with very different abilities due to their individual characteristics, previous experiences, and education. While some children hardly know any letters or numbers, others can already read, write, and calculate quite fluently. To optimally support young learners according to their respective starting conditions, teachers must recognize students' learning prerequisites and adapt instruction to students' needs. To this end, both valid and economical assessments as well as effective and differentiated interventions are needed. This Research Topic addresses new developments in early assessments and assessment-based interventions around the time of school entry from the last year before enrollment until second grade. In particular, this Research Topic aims to bring together research that directly contributes to assessing children's difficulties and providing evidence-based support. We highly welcome new innovative approaches from the fields of education, didactics, and psychology that focus on the assessment and assessment-based instruction in reading, writing, and maths. Any empirical studies that help to improve the assessment and assessment-based interventions for the competencies mentioned are welcome. We are looking for empirical, quantitative or qualitative studies dealing with the target group of children around the age of school entry (last year of kindergarten to second grade elementary school) that include at least one of the following topics: the presentation or testing of new assessment procedures that focus on performance in and prerequisites for reading, writing, and maths; assessment-based interventions (both whole class or individual approaches) in reading, writing, and maths; the co-development

of sub skills in reading writing and maths and consequences for assessment and intervention Please note that manuscripts without prior submission of an abstract will not be considered for the research topic **Journal for Research in Mathematics Education** ,2008 Linguistic Influences on Mathematical Cognition Ann Dowker,Hans-Christoph Nuerk,2017-06-16

For many years an abstract amodal semantic magnitude representation largely independent of verbal linguistic representations has been viewed as the core numerical or mathematical representation This assumption has been substantially challenged in recent years Linguistic properties affect not only verbal representations of numbers but also numerical magnitude representation spatial magnitude representations calculation parity representation place value representation and even early number acquisition Thus we postulate that numerical and arithmetic processing are not fully independent of linguistic processing This is not to say that in patients magnitude processing cannot function independently of linguistic processing we just suppose these functions are connected in the functioning brain So far much research about linguistic influences on numerical cognition has simply demonstrated that language influences number without investigating the level at which a particular language influence operates After an overview we present new findings on language influences on seven language levels Conceptual Conceptual properties of language Syntactic The grammatical structure of languages beyond the word level influences Semantic The semantic meaning or existence of words Lexical The lexical composition of words in particular number words Visuo spatial orthographic Orthographic properties such as the writing reading direction of a language Phonological Phonetic properties of languages Other language related skills Verbal working memory and other cognitive skills related to language representations We hope that this book provides a new and structured overview on the exciting influences of linguistic processing on numerical cognition at almost all levels of language processing

**Resources in Education** ,1986 Serves as an index to Eric reports microform **Snapshot Assessment System for Migrant, Language Minority, and Mobile Students** Rich Rangel,1997 *Numerical Development - From cognitive functions to neural underpinnings* Korbinian Moeller,Elise Klein,Klaus F Willmes - von Hinckeldey,Karin Kucian,2015-02-24 Living at the beginning of the 21st century requires being numerate because numerical abilities are not only essential for life prospects of individuals but also for economic interests of post industrial knowledge societies Thus numerical development is at the core of both individual as well as societal interests There is the notion that we are already born with a very basic ability to deal with small numerosities Yet this often called number sense seems to be very restricted approximate and driven by perceptual constraints During our numerical development in formal e g school but also informal contexts e g family street we acquire culturally developed abstract symbol systems to represent exact numerosities in particular number words and Arabic digits refining our numerical capabilities In recent years numerical development has gained increasing research interest documented in a growing number of behavioural neuro scientific educational cross cultural and neuropsychological studies addressing this issue Additionally our understanding of how numerical competencies develop has also benefitted

considerably from the advent of different neuro imaging techniques allowing for an evaluation of developmental changes in the human brain In sum we are now starting to put together a more and more coherent picture of how numerical competencies develop and how this development is associated with neural changes as well In the end this knowledge might also lead to a better understanding of the reasons for atypical numerical development which often has grieve consequences for those who suffer from developmental dyscalculia or mathematics learning disabilities Therefore this Research Topic deals with all aspects of numerical development findings from behavioural performance to underlying neural substrates from cross sectional to longitudinal evaluations from healthy to clinical populations To this end we included empirical contributions using different experimental methodologies but also theoretical contributions review articles or opinion papers

**The Arithmetic Teacher** ,1977    **Investigations in Mathematics Education** ,1986    *Different Ways Children Learn to Add and Subtract* Thomas A. Romberg, Kevin Francis Collis, 1987

This monograph summarises the findings from five related studies carried out in Sandy Bay Tasmania in 1979 80 The overall purpose of the studies was to examine whether children in Years 1 3 who differed in cognitive capacity learned to add and subtract in different ways The first study was a cross sectional survey designed to determine the memory capacity of a population of children The second study was designed to portray performance differences on a variety of mathematically related developmental tasks for the same population of children Data from these two studies were used to form groups of children who different in cognitive capacity Six groups were formed via cluster analysis with memory capacity being the primary distinguishing characteristic The third fourth and fifth studies each used a sample of students from the six cluster groups across grades The third study examined both the performance and the strategies these children used to solve a structured set of addition and subtraction word problems The fourth study involved repeated assessment of the children s performance on items measuring objectives related to addition and subtraction In the last study these children and their teachers were observed during classroom instruction in mathematics to see how addition and subtraction were taught and whether or not instruction was related to the children s cognitive capacity The results show that children s differences in capacity were reflected in their performance on both verbal and standard problems and in the strategies they used to solve problems

*Educational Assessment of Students* Anthony J. Nitko, Susan M. Brookhart, 2007 From two of the best known authors in the field of classroom assessment comes a revision of one of the best assessment books Features include hundreds of examples directions for crafting both traditional and alternative assessments checklists for evaluating classroom assessments scores of strategies for assessing problem solving and critical thinking methods for aligning classroom assessment with state standards and NCLB requirements Reviewers have described the book as the best on the market for its completeness and balanced approach to classroom assessment

Singleton, Terry L. Weaver, 2002 With the composition of today's classroom in mind this book approaches teaching and planning elementary mathematics by using methods that accommodate the diverse learning needs of any student having difficulties with basic math concepts. The authors use personal experience and research that supports a complete set of developmental concepts and skills to outline the effective development of mathematical concepts and skills. It stresses lesson planning that will result in learning understanding and retaining important concepts and skills. NCTM's Curriculum and Evaluation Standards for School Mathematics are integrated into every chapter. Other topics include Diversity in the Classroom, Lesson Design, Creating Lessons That Meet the Needs of a Diverse Classroom, Mathematics Learning in Early Childhood, Whole Numbers and Numeration, Fractions, Decimals, and Percents, Measurement and Geometry.    *Resources in Education*, 1992    **Measurement and Evaluation in Early Childhood Education** Sue Clark Wortham, 1995    Comprehensive Dissertation Index, 1984
