**Selected Scientific Papers** Balthasar van der Pol, 1960 **Samuelsonian Economics and the Twenty-First Century** Michael Szenberg, Lall Ramrattan, Aron A. Gottesman, 2006-08-24 This volume illuminates and critically assesses Paul A Samuelson's voluminous and groundbreaking contributions to the field of economics. The volume includes contributions from eminent scholars including 6 Nobel Laureates covering the extraordinary depth and breadth of Samuelson's contributions. Samuelson, the first American economist to win the Nobel prize in 1970, was the foremost voice in economics in the latter half of the 20th century. He single handedly transformed the discipline by creating a new way of presenting economics, making it possible for it to be cast all in mathematical terms. Samuelson developed broad frameworks such as the neoclassical synthesis, a mixed economy and the surrogate production function which provided practitioners with a vision for research. Samuelson's contributions to economics are rich, complex, consequential and relevant to the ordinary economics of life. The quality of Samuelson's output and methods leave no doubt that his contributions continue to be timely and relevant even in the 21st century. Ideal as a reference or an introduction to Samuelson's work, this is a must have for students and academics alike.

**Redirecting Science** Finn Aaserud, 2003-01-30 This volume is an important study for understanding the complex interconnections between basic science and its sources of economic support in the period between the two world wars. The focus of the study is on the Institute for Theoretical Physics, later renamed the Niels Bohr Institute at Copenhagen University, and the role of its director, the eminent Danish physicist Niels Bohr, in the funding and administration of the Institute. Under Bohr's direction, the Copenhagen Institute was a central workplace in the development and the formulation of quantum mechanics in the 1920s and later became an important center for nuclear research in the 1930s. Dr Aaserud brings together the scholarship on the internal origins and development of nuclear physics in the 1930s with descriptions of the concurrent changes in private support for international basic science, particularly as represented by Rockefeller Foundation philanthropy. In the process, the book places the emergence of nuclear physics in a larger historical context. This book will appeal to historians of science, physicists and advanced students in these areas.
