Dean Merrill Schweickhard

The Saw Learning About Tools:

Situation Assessment in Aviation Jitendra R. Raol, Sudesh K. Kashyap, Lakshmi Shrinivasan, 2024-02-29 Situation Assessment in Aviation focuses on new aspects of soft computing technologies for the evaluation and assessment of situations in aviation scenarios. It considers technologies emerging from multisensory data fusion, MSDF, Bayesian networks, BN, and fuzzy logic, FL, to assist pilots in their decision making. Studying MSDF, BN, and FL from the perspective of their applications to the problem of situation assessment, the book discusses the development of certain soft technologies that can be further used for devising more sophisticated technologies for a pilot's decision making when performing certain tasks: airplane monitoring, pair formation, attack and threat. It explains the concepts of situation awareness, data fusion, decision fusion, Bayesian networks, fuzzy logic, type 1 and interval type 2 fuzzy logic. The book also presents a hybrid technique by using BN and FL and a unique approach to the problem of situation assessment beyond visual range and air-to-air combat by utilizing building blocks of artificial intelligence, AI, for the future development of more advanced automated systems, especially using commercial software. The book is intended for aerospace R & D engineers, systems engineers, aeronautical engineers, and aviation training professionals. It will also be useful for aerospace and electrical engineering students taking courses in Air Traffic Management, Aviation Management, Aviation Operations, and Aviation Safety Systems. System on the Farm, 1919
