**AI in the Wild** Peter Dauvergne,2020-09-15 Examining the potential benefits and risks of using

artificial intelligence to advance global sustainability Drones with night vision are tracking elephant and rhino poachers in African wildlife parks and sanctuaries smart submersibles are saving coral from carnivorous starfish on Australia's Great Barrier Reef recycled cell phones alert Brazilian forest rangers to the sound of illegal logging The tools of artificial

intelligence are being increasingly deployed in the battle for global sustainability And yet warns Peter Dauvergne we should be cautious in declaring AI the planet's savior In AI in the Wild Dauvergne avoids the AI industry powered hype and offers a critical view exploring both the potential benefits and risks of using artificial intelligence to advance global sustainability

Dauvergne finds that corporations and states often use AI in ways that are antithetical to sustainability The competition to profit from AI is entrenching technocratic management revving up resource extraction and turbocharging consumption as consumers buy new smart devices and discard their old less smart ones Smart technology is helping farmers grow crops more efficiently but also empowering the agrifood industry Moreover states are weaponizing AI to control citizens suppress dissent and aim cyberattacks at rival states Is there a way to harness the power of AI for environmental and social good

Dauvergne argues for precaution and humility as guiding principles in the deployment of AI
