Sumo Regulation Of Cellular Processes:

SUMO Regulation of Cellular Processes Van G. Wilson, 2017-02-13 This is the second edition of a very well received book that details how the sumoylation system functions and how it modulates numerous cellular activities SUMO is a post translational modifier in the ubiquitin super family that has gained recognition over the last twenty years as an essential and prevalent regulatory molecule Individual chapters explore the biochemistry molecular biology and cell biology of the sumoylation system and its substrate proteins The book is divided into three themed parts Molecular Functions I Cell Growth Regulation II and Diseases III Parts I and II focus on the contribution of sumoylation to cellular activities in both the nuclear and cytoplasmic compartments The nuclear activities covered include nucleic acid metabolism both RNA and DNA chromosome structure and replication and nucleocytoplasmic transport Cytoplasmic processes presented include regulation of membrane ion channels general metabolism and apoptotic signalling Topics in Part III include the role of sumoylation in developmental abnormalities craniofacial and cardiovascular diabetes neurodegenerative diseases cancer and infections with viruses and bacteria Each of the corresponding chapter authors is an active researcher who has made significant contributions to understanding sumoylation This second edition provides updates and revisions to most of the original chapters plus adds six new chapters to address important developing areas of sumoylation research This volume is intended for a scientific audience from undergraduates to independent researchers The content will serve as both a solid introduction for the novice reader and an in depth treatment for the advanced scholar

Cellular and Molecular Mechanisms Underlying the Pathogenesis of Hepatic Fibrosis Ralf Weiskirchen, 2020-12-29 Worldwide liver fibrosis is a major cause of morbidity and mortality and is associated with a high medical and economic burden It is the common consequence of chronic liver injury due to various etiologies During fibrogenesis there is a progressive substitution of the liver parenchyma by scar tissue Recent advances in the understanding of the history of liver fibrosis have shown that the pathogenesis is driven by different cell types and a large variety of soluble mediators At present scientists working in this field aim to increase basic knowledge improve diagnostics and try to translate experimental findings into new treatment modalities This book includes 12 selected contributions from the Special Issue Cellular and Molecular Mechanisms Underlying the Pathogenesis of Hepatic Fibrosis that was published in Cells These articles summarize current perspectives and findings in hepatic fibrosis research showing how scientists try to use basic scientific research to create new therapies and diagnostics

Community Series in Targeting Signalling Pathways in Inflammatory Diseases, volume II Uzma Saqib, Mirza S. Baig, Syed Faisal, Suraj P. Parihar, 2025-08-18 Protein protein interactions PPIs are involved in almost every cellular process They represent attractive targets for modulating signaling pathways leading to disease states However they are challenging to target with small molecules peptides for example due to varied reasons Although a growing number of PPIs have become validated drug targets there is only a little percentage of them have been used to successfully design potent drugs PPIs play

an important role in signaling events leading to inflammation Many inflammatory diseases are solely based on specific signaling pathways inside the cells which are in turn driven by a prior event of a protein protein interaction or several protein protein interactions It has been clearly shown by many investigators across the world that targeting such interactions would be the best way to attenuate the signaling events and eventually the inflammation In the last few years various PPIs modulators have entered clinical studies some of which have been approved for marketing strengthening our idea that modulators targeting PPIs have broad prospects in clinical research The conventional methods using medicinal chemistry protocols are less effective and time consuming for designing and identifying PPI modulators Thus it is necessary to develop more effective approaches for screening the PPI modulators A wide variety of strategies including High throughput screening HTS in silico modeling and the most recent Artificial Intelligence AI could multiply the results in terms of time and effort We would like to invite potential authors researching on topics associated with studies focused on the role of protein protein interactions as well as targeting those in inflammatory signaling leading to multiple diseases including sepsis etc Articles specifically encompassing the following are welcome 1 Artificial Intelligence AI in PPI based drug discovery in immune mediated inflammatory disease 2 Novel cell based high output assays for quicker screening of novel drugs against PPI s in immune mediated inflammatory disease 3 Novel PPI s and their therapeutic targeting in inflammation and sepsis Please note Bioinformatics or Computational Analysis of public genome or transcriptome databases need to be accompanied by robust and relevant validation to be submitted to this section Manuscripts describing the pharmacological action of drugs used in traditional medicine in models of disease are not in scope of this Research Topic unless they have a strong focus on the immune system This Research Topic is the second volume of the Community Series in Targeting Signalling Pathways in Inflammatory Diseases Please see the first volume here **Integrated Methods in Protein Biochemistry: Part A**

includes the latest information on Integrated Methods in Protein Biochemistry The Link Between Inflammation and Cancer Angus G. Dalgleish, Burkhard Haefner, 2006-03-05 A link between inflammation and cancer has been established many years ago yet it is only recently that the potential significance of this connection has become apparent Although several examples of chronic inflammatory conditions often induced by persistent irritation and or infection developing into cancer have been known for some time there has been a notable resistance to contemplate the possibility that this association may apply in a causative way to other cancers Examples for such progression from chronic inflammation to cancer are colon carcinoma developing with increased frequency in patients with ulcerative colitis and the increased incidence of bladder cancer in patients suffering from chronic Schistosoma infection Inflammation and cancer have been recognized to be linked in another context for many years i e with regards to pathologies resembling chronic lacerations or wounds that do not heal More recently the immunology of wound healing has given us clues as to the mechanistic link between inflammation and cancer in as much as wounds and chronic inflammation turn off local cell mediated immune responses and switch on growth factor release as well the growth of new blood vessels angiogenesis Both of these are features of most types of tumours which suggest that tumours may require an immunologically shielded milieu and a growth factor rich environment The HANDBOOK on CANCER Müzeyyen İzmirli, 2023-05-25 Muzeyyen Izmirli Prof Dr published over thirty articles three book chapter and numerous poster presentation Moreover she joined in lots of scientific research She interests in molecular cell biology cancer and especially the fate of cell Cancer disease includes pathological cell processes This book in your hand is started with this quotation After rapid advances about the increases of the knowledge that cell structure and experimental methods cancer research has progressed However some scientists would argue that the studies for the origin and treatment of this disease will continue over the next years in much the same attitude as it has in the recent past On the other hand I suppose that science will geometrically grow So a lot of scientific fact will be found about cancer diagnosis treatment and protect to disease next decade This book includes 14 chapters Chapter 1 The History of Cancer Chapter 2 The Main Aspects of Cancer Chapter 3 Cancer Signalling Chapter 4 Metabolism in Cancer Chapter 5 Cancer Pathology Chapter 6 The Genetic of Cancer Chapter 7 Mutagenic Factors in Carcinogenesis Chapter 8 Cancer Biomarkers Chapter 9 Epigenetic of Cancer Chapter 10 Circadian Rhythm in Cancer Chapter 11 Immunity in Cancer Chapter 12 Treatment of Cancer Chapter 13 Senescence and Cancer Chapter 14 The Cancer Classes In these fourteen chapters the issues of cancer has been tried to be addressed in many aspects I hope that it will help you Stay with curious and science **Encyclopedia of Molecular Pharmacology** Stefan Offermanns, W.
