Turing Great Philosophers:

The Great Philosophers: Turing Andrew Hodges, 2011-09-14 Alan Turing's 1936 paper On Computable Numbers introducing the Turing machine was a landmark of twentieth century thought. It settled a deep problem in the foundations of mathematics and provided the principle of the post war electronic computer. It also supplied a new approach to the philosophy of the mind. Influenced by his crucial codebreaking work in the Second World War and by practical pioneering of the first electronic computers, Turing argued that all the operations of the mind could be performed by computers. His thesis made famous by the wit and drama of the Turing Test is the cornerstone of modern Artificial Intelligence. Here Andrew Hodges gives a fresh and critical analysis of Turing's developing thought relating it to his extraordinary life and also to the more recent ideas of Roger Penrose.

Turing's Connectionism Christof Teuscher, 2012-12-06 Alan Mathison Turing 1912-1954 was the first to carry out substantial research in the field now known as Artificial Intelligence AI. He was thinking about machine intelligence at least as early as 1941 and during the war circulated a typewritten paper on machine intelligence among his colleagues at the Government Code and Cypher School GC both were topics that Turing discussed extensively during the war years at GC CS as was mechanical chess 121. In 1945 the war in Europe over, Turing was recruited by the National Physical Laboratory NPL in London his brief to design and develop an electronic stored program digital computer a concrete form of the universal Turing machine of 1936 185. Turing's technical report Proposed Electronic 2 Calculator dating from the end of 1945 and containing his design for the Automatic Computing Engine ACE was the first relatively complete specification of an electronic stored program digital computer 193-197. The document First Draft of a Report on the EDVAC produced by John von Neumann and the Moore School group at the University of Pennsylvania in May 1945 contained little engineering detail in particular concerning electronic hardware 202.

The Realities of Reality - Part II: Making Sense of

Why Modern Science Advances (Volume 1) Fritz Dufour, MBA, DESS, 2018-09-19 This Volume 1 of Part II considers the factors that make science progress. It lays out the differences between normal science and pseudoscience by showing the importance of the scientific method in the advancement of science. It introduces the concept of Truth in science by raising the point that even though truth is based on the scientific method can science be true? Can it depict reality? The author focuses on modern science which he thinks was born thanks to the Scientific Revolution which started with Galileo Galilei and led to the Industrial Revolution. The impacts of the latter is analyzed in light modernism, modernization and modernity all three linked to scientific progress. The book also talks about the Newtonian scientific leap by analyzing particularly the then social and political fabrics of England and Albert Einstein by showing how he changed history. According to the author our very physical world can help us understand scientific progress. So he explains among other things the structure of atoms and molecules, the role of physics in the understanding of our universe, Quantum Mechanics and the importance of Higgs Boson. On the other hand the book is a stunning revelation of how important information is to scientific progress. To make his point the author first talks about John Vincent Atanasoff as the Father of computer thanks to the invention of his ABC computer and then Alan Turing as the Father of modern computer thanks to his Turing Test and his views on Artificial Intelligence. Both men played a momentous role in the Digital Revolution and in the Information Age according to the book. Finally the author talks about nanotechnology which explores the world of small meaning at the atomic and the molecular levels and is an inescapable tool in the molecular biology revolution which itself is an important factor in scientific progress and in transhumanism or human enhancement defined as the ideology according to which man can surpass his present state by improving his genetic material.

A Good Way to Go Colin G. Jamieson, 2013-06-25 A Good Way to Go considering self determination, mercy, self termination, tackles the difficult subjects of living, dying, suicide and euthanasia but concentrates on the care that can be given. The book is aimed at the general public not so much to be authoritative as to provide original thoughts and comprehensive enough to provide helpful material to stimulate discussions and provide an overview that might facilitate wholesome changes in our society. It is said to be well written and raising new and interesting points. The plea for a more merciful society begins with pastoral help to the dying, a better understanding of suicide, acceptance of self termination, a look at ethics, health services and the law in regard to euthanasia. It is written from a Christian Western perspective because that is what has brought us to this place of confusion and anxiety about death and dying. It is important that we take our bicultural and multicultural future very seriously in an ever increasing secular world and it would be audacious to speak on any other cultures behalf.

mathematical work by the Anti Hitler coalition was part of an aspiration to serve humanity and not help destroy it At present it is not an easy task to view the bellicose potentials of mathematics in a proper perspective The book presents historical evidence and recent changes in the interaction between mathematics and the military It discusses the new mathematically enhanced development of military technology which seems to have changed the very character of modern warfare
