Otto, Troy

Day, 2011-09-19 Thirty years ago biologists could get by with a rudimentary grasp of mathematics and modeling Not so today

In seeking to answer fundamental questions about how biological systems function and change over time the modern biologist is as likely to rely on sophisticated mathematical and computer based models as traditional fieldwork In this book

Sarah Otto and Troy Day provide biology students with the tools necessary to both interpret models and to build their own

The book starts at an elementary level of mathematical modeling assuming that the reader has had high school mathematics and first year calculus Otto and Day then gradually build in depth and complexity from classic models in ecology and

evolution to more intricate class structured and probabilistic models The authors provide primers with instructive exercises to introduce readers to the more advanced subjects of linear algebra and probability theory Through examples they describe

how models have been used to understand such topics as the spread of HIV chaos the age structure of a country speciation and extinction Ecologists and evolutionary biologists today need enough mathematical training to be able to assess the power

and limits of biological models and to develop theories and models themselves This innovative book will be an indispensable guide to the world of mathematical models for the next generation of biologists A how to guide for developing new

mathematical models in biology Provides step by step recipes for constructing and analyzing models Interesting biological applications Explores classical models in ecology and evolution Questions at the end of every chapter Primers cover

*Foundations of Mathematical Physics* is a compelling introduction for undergraduates venturing into the intricate relationship between mathematics and physics We navigate the core principles that sculpt the universe from the quantum to the cosmic scale making this book an essential

companion for students unraveling the physical world's mysteries through mathematical lenses Structured to bridge

theoretical concepts with practical applications we meticulously unfold the marvels of mathematical physics ensuring each topic is approachable without sacrificing depth This book offers a unique blend of theory worked examples and problem sets

that challenge and engage students facilitating deep comprehension We stand out by demystifying complex ideas making this an invaluable resource for students with varied proficiency in mathematics or physics Whether you aim to grasp the fundamentals of quantum mechanics delve into special relativity s elegance or understand general relativity s geometric beauty this book paves the path for a profound understanding of the universe through mathematical frameworks Embark on this intellectual journey to discover how mathematical physics illuminates the universe s workings in an accessible and inspiring way

and Its Applications by Lay and the accompanying Student Study Guide Linear algebra is relatively easy for students during the early stages of the course when the material is presented in a familiar concrete setting But when abstract concepts are introduced students often hit a brick wall Instructors seem to agree that certain concepts such as linear independence spanning subspace vector space and linear transformations are not easily understood and require time to assimilate Since they are fundamental to the study of linear algebra students understanding of these concepts is vital to their mastery of the subject David Lay introduces these concepts early in a familiar concrete Rn setting develops them gradually and returns to them again and again throughout the text so that when discussed in the abstract these concepts are more accessible An integral part of this text the Study Guide incorporates detailed solutions to every third odd numbered exercise as well as solutions to every odd numbered writing exercise for which the main text only provides a hint    Cumulative Book Index
