

### Introduction

Some most physical quantities have a both a size and a direction, we can use a mathematical tool to describe these quantities. In this study you will introduce the basic concept of the vector.

### Vector: What is, Application to Motion

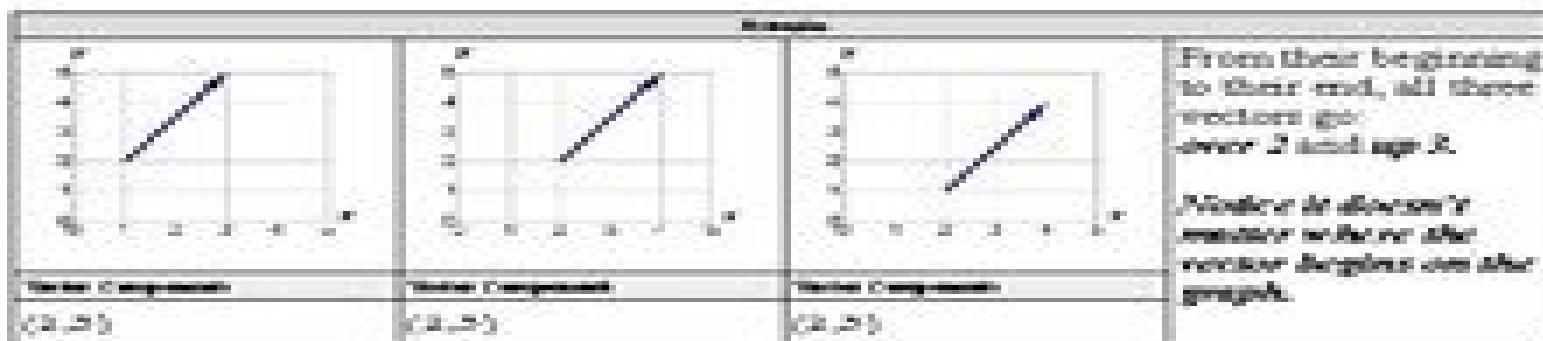

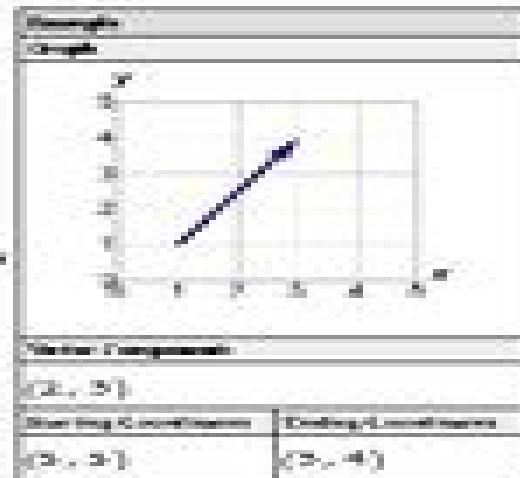

The arrow on the graph here is called a vector. To find the size and components of a vector we look at how far the overall bow is up and how far it goes.

In this example, the distance over to the right (the x-component) is 3.

The distance up (the y-component) is 3.

So our vector goes over 3, and up 3.
