Newton did observe that when any object, such as an apple, was released near the surface of the earth, it was accelerated toward the earth. Since the cause of an acceleration is an unbalanced force, there must, therefore, be a force pulling objects toward the earth. If you throw the apple, or any other projectile, at an initial velocity v_0 , as seen in figure 10.1, then instead of that apple moving off into space in a straight line as

Figure 10.1 Motion of an apple or a projectile.

Newton's first law dictates, it is continually acted on by a force pulling it back to earth. If you were strong enough to throw the apple or any projectile with greater and greater initial velocities, then the projectile paths would be as shown in figure 10.2. The distance down range would become greater and greater until at some

initial velocity, the projectile would not hit the earth at all, but would go right around it in an orbit. But at any point along its path the projectile would still have a force acting on it pulling it down toward the surface of the earth just as it had in
