Failure Time Data Jianguo Sun, 2007-05-26 This book collects and unifies statistical models and methods that have been proposed for analyzing interval censored failure time data It provides the first comprehensive coverage of the topic of interval censored data and complements the books on right censored data The focus of the book is on nonparametric and semiparametric inferences but it also describes parametric and imputation approaches This book provides an up to date reference for people who are conducting research on the analysis of interval censored failure time data as well as for those who need to analyze interval censored data to answer substantive questions **The Statistical Analysis of Multivariate**

Failure Time Data Ross L. Prentice, Shanshan Zhao, 2019-05-14 The Statistical Analysis of Multivariate Failure Time Data A Marginal Modeling Approach provides an innovative look at methods for the analysis of correlated failure times The focus is on the use of marginal single and marginal double failure hazard rate estimators for the extraction of regression information For example in a context of randomized trial or cohort studies the results go beyond that obtained by analyzing each failure time outcome in a univariate fashion The book is addressed to researchers practitioners and graduate students and can be used as a reference or as a graduate course text Much of the literature on the analysis of censored correlated failure time data uses frailty or copula models to allow for residual dependencies among failure times given covariates In contrast this book provides a detailed account of recently developed methods for the simultaneous estimation of marginal single and dual outcome hazard rate regression parameters with emphasis on multiplicative Cox models Illustrations are provided of the utility of these methods using Women s Health Initiative randomized controlled trial data of menopausal hormones and of a low fat dietary pattern intervention As byproducts these methods provide flexible semiparametric estimators of pairwise bivariate survivor functions at specified covariate histories as well as semiparametric estimators of cross ratio and concordance functions given covariates The presentation also describes how these innovative methods may extend to handle issues of dependent censorship missing and mismeasured covariates and joint modeling of failure times and covariates

setting the stage for additional theoretical and applied developments This book extends and continues the style of the classic Statistical Analysis of Failure Time Data by Kalbfleisch and Prentice Ross L Prentice is Professor of Biostatistics at the Fred Hutchinson Cancer Research Center and University of Washington in Seattle Washington He is the recipient of COPSS Presidents and Fisher awards the AACR Epidemiology Prevention and Team Science awards and is a member of the National Academy of Medicine Shanshan Zhao is a Principal Investigator at the National Institute of Environmental Health Sciences in Research Triangle Park North Carolina

Statistical Analysis of Failure Time Data with Missing Information Ping Chen, 2009 Failure time data arise in many fields and can involve different types of censoring structures and missing information We consider three cases right censored data with missing censoring indicators clustered current status data and clustered interval censored data Chapter 2 discusses regression analysis of right censored failure time data with missing censoring indicators and presents an efficient estimation procedure based on the EM algorithm The simulation study

performed indicates that the proposed methodology performs well for practical situations An illustrative example from a breast cancer clinical trial is provided Chapter 3 discusses regression analysis of clustered current status data For inference a Cox frailty model and a two step EM algorithm are presented A simulation study was conducted for the evaluation of the proposed methodology and indicates that the approach performs well for practical situations An illustrative example from a tumorigenicity experiment is provided Chapter 4 generalizes the study of Chapter 3 to clustered interval censored data Chapter 5 discusses some directions for future research

Statistical Analysis of Interval-censored Failure Time Data Alicia Worrall, 2015 In this thesis we will examine the statistical methods used in survival analysis applied to interval censored failure time data Interval censored data is not widely used due to the fact that it is more difficult to work with However the same methods commonly used for random censoring can be applied to interval censoring as well This includes finding the basic quantities survival curves regression analysis Bayesian regression analysis and a comparison between interval censored data and random censored data

Accelerated Life Models Vilijandas Bagdonavicius,Mikhail Nikulin,2002-01 The authors of this monograph have developed a large and important class of survival analysis models that generalize most of the existing models In a unified systematic presentation this monograph fully details those models and explores areas of accelerated life testing usually only touched upon in the literature Accelerated Life Models Modeling and Statistical Analysis presents models methods of data collection and statistical analysis for failure time regression data in accelerated life testing and for degradation data with explanatory variables In addition to the classical results the authors devote considerable attention to models with time varying explanatory variables and to methods of semiparametric estimation They also examine the simultaneous analysis of degradation and failure time data when the intensities of failure in different modes depend on the level of degradation and the values of explanatory variables The authors avoid technical details by explaining the ideas and referring to resources where thorough analysis can be found Whether used for teaching research or general reference Accelerated Life Models Modeling and Statistical Analysis provides new and known models and modern methods of accelerated life data analysis
