Computation, Physics and Beyond Michael J. Dinneen, Bakhadyr Khoussainov, Prof. Andre Nies, André Nies, 2012-01-17 This Festschrift volume has been published in honor of Cristian Calude on the occasion of his 60th birthday and contains contributions from invited speakers and regular papers presented at the International Workshop on Theoretical Computer Science WTCS 2012 held in Auckland New Zealand in February 2012. Cristian Calude has made a significant contribution to research in computer science theory. Along with early work by Chaitin, Ku, era Kurtz, Solovay and Terwijn his papers published in the mid 1990s jointly with Khoussainov, Hertling and Wang laid the foundation for the development of modern theory of algorithmic randomness. His work was essential for establishing the leading role of New Zealand in this

area The research interests of Cristian Calude are reflected in the topics covered by the 32 papers included in this book namely algorithmic information theory algorithms automata and formal languages computing and natural sciences computability and applications logic and applications philosophy of computation physics and computation and unconventional models of computation They have been organized into four parts The first part consists of papers discussing his life achievements This is followed by papers in the three general areas of complexity computability and randomness physics philosophy and logic and computation and algorithms automata and formal models including unconventional computing

This book discusses the applications of evolutionary computation to music and the tools needed to create and study such systems. These tools can be combined to create surrogate artificial worlds populated by interacting simulated organisms in which complex musical experiments can be performed. The book demonstrates that evolutionary systems can be used to create and to study musical compositions and cultures in ways that have never before been achieved. **Weighted Fourier Image Analysis and Modeling** by Shubing Wang, 2008.
