A. Burtt, 2016-05-15 To the medieval thinker man was the center of creation and all of nature existed purely for his benefit. The shift from the philosophy of the Middle Ages to the modern view of humanity's less central place in the universe ranks as the greatest revolution in the history of Western thought, and this classic in the philosophy of science describes and analyzes how that profound change occurred. A fascinating analysis of the works of Copernicus, Kepler, Galileo, Descartes, Hobbes, Gilbert Boyle, and Newton, it not only establishes the reasons for the triumph of the modern perspective but also accounts for certain limitations in this view that continue to characterize contemporary scientific thought. A criticism as well as a history of the change that made possible the rise of modern science, this volume is also a guide to understanding the methods and accomplishments of the great philosopher-scientists of the sixteenth and seventeenth centuries. *The Metaphysical Foundations of Modern Physical Science; a Historical and Critical Essay* Edwin A. And it is all so novel.

too The cosmology underlying our mental processes is but three centuries old a mere infant in the history of thought and yet we cling to it with the same embarrassed zeal with which a young father fondles his new born baby Like him we are ignorant enough of its precise nature like him we nevertheless take it piously to be ours and allow it a subtly pervasive and unhindered control over our thinking About the Publisher Forgotten Books publishes hundreds of thousands of rare and classic books Find more at www.forgottenbooks.com This book is a reproduction of an important historical work Forgotten Books uses state of the art technology to digitally reconstruct the work preserving the original format whilst repairing imperfections present in the aged copy In rare cases an imperfection in the original such as a blemish or missing page may be replicated in our edition We do however repair the vast majority of imperfections successfully any imperfections that remain are intentionally left to preserve the state of such historical works

a result these intellectuals refuse to acknowledge as factual or meaningful whatever is not intelligible within the practical goals of establishing science as a system of enlightened ideas The effect of these ideas is that in our time metaphysical principles speculative truths our understanding of science and the nature of logic have become subordinated to ideological dreams Fascism Nazism Marxism political correctness and moral relativism are not historical aberrations but essential consequences Trundle s work is groundbreaking and daring and his underlying thesis demonstrates why scientific truth demands a modal defense The defense not only integrates science ethics and politics but shows how truth may be ascribed to moral and scientific principles in contrast to a modern philosophical tradition Since this tradition is the origin of political ideology it has led to an irrational politicization of truth The book will appeal particularly to those interested in political history histories of philosophy the philosophy of sciences and ethics
