The MMPI Robert C. Colligan, Kenneth P. Offord, 1992 The Minnesota Multiphasic Personality Inventory MMPI is the most widely used and thoroughly researched of all the objective personality assessment instruments. However current norms for adolescents are based on cases drawn from studies conducted 25-45 years ago. This book presents the procedures used to develop contemporary adolescent norms and is intended to serve as a manual for their use. The study used 1315 randomly selected non-paid adolescent males and females ranging in age from 13 through 17 years who were screened for physically or mentally handicapping conditions that might have biased response patterns. Contemporary norms using the traditional approach of scores without K correction as well as entirely new norms based on raw scores with K correction were developed. All of the normative tables use easily normalized T-scores instead of the linear transformations that have been used in the past. In the adolescent study changes were studied that might have occurred in the way contemporary normal adolescents in junior and senior high school responded to the items of the MMPI. Because of the many significant changes that were observed when MMPI responses from our contemporary normal adult sample were compared with the original adult MMPI norms, it is believed that it was necessary to investigate the possibility that similar changes had occurred among adolescents ages 13-17 years during the 25 years since Marks and Briggs established their normal adolescent samples.

The Psychology of Individual Differences: Clinical and applied research Gregory John Boyle, Donald H. Saklofske, 2004 A comprehensive up-to-date and international synthesis of some of the most significant publications in the psychology of individual differences over the past two decades including highly cited empirical articles, critical review articles and key book chapters that have influenced debates in the field.

MMPI-A Robert P. Archer, 1992 Dr. Archer's 1987 text, "Using the MMPI With Adolescents," received outstanding critical reviews and served as a comprehensive guide to the application of the original MMPI with teenagers. This text included a series of practical recommendations concerning the interpretive practices uniquely suited for this age group. The University of Minnesota Press has recently developed the Minnesota Multiphasic Personality Inventory Adolescent MMPI-A, which represents the first revision of the MMPI for use specifically with adolescents. As a member of the University of Minnesota Adolescent Project Committee responsible for the development of the MMPI-A, Dr. Archer is uniquely qualified to provide an in-depth introduction to this new instrument. The MMPI-A features the release of new adolescent norms based on a contemporary sample of 1620 adolescents, the revision of many traditional items to increase readability and relevance to adolescent development and psychopathology, and the inclusion of new items and scales. This guide was written to provide facts and recommendations on the essential features of the MMPI-A for those clinicians, students, and researchers interested in understanding and using this

new instrument The text reviews the reasons for the development of the MMPI A and discusses its salient features including new validity content and supplementary scales MMPI A single scale and codetype correlates are presented as well as clinical case examples illustrating interpretive principles Throughout this book emphasis is placed on presenting information that is of direct clinical relevance for practitioners while also providing sufficient technical information and research data to serve as a guide for research efforts in this field
