**Made-to-Order Lean** Greg Lane, 2020-03-09 Toyota Production System methods have rendered remarkable results in high volume manufacturing plants but they have not been fully understood and correctly applied in high mix low volume environments. While lean principles do apply the implementation methods and tools must be adapted and alternate methods embraced in a low volume environment. This volume is specifically geared for manufacturers that have hundreds to thousands of active part numbers with few or no ongoing forecasted volumes and for job shops that build only to order. The primary focus is eliminating non value added activities and instituting improvements on the most repetitive jobs a strategy that gives you more time to produce your low volume work or one offs. About the author Greg Lane is a faculty member of the Lean Enterprise Institute and an advisor to the Instituto de Lean Management in Spain. During his time with

Toyota he was one of a handful of candidates selected for a one year training program conducted by the company's masters. He became certified as a Toyota Production System TPS Key Person and continued his work with Toyota training others in TPS. He has been highly active in working on implementing lean around the world supporting large and small companies alike. In 1998 he began to focus his lean endeavors on meeting the specific needs of high mix low volume enterprises. During his time as an independent consultant Greg purchased and operated his own manufacturing company which specialized in fast turnaround on high mix low volume parts. Greg used TPS to grow the business and nearly double its sales. Greg and his associates have experience not only at adapting the methods contained in this book but also in applying other tools that are too numerous to detail here. They can be reached for further support with your lean transformation via email glane@lowvolumelean.com

### **Lean Transportation**

**Management** Mohamed Achahchah,2018-09-17 This book provides an overview of the key transportation management processes from a shipper's perspective. It enables managers to gain quick insight in the added value of transportation as a strategic differentiator its key drivers and guidelines on how to use them in an effective and efficient decision making process. It explains how to identify and eliminate waste using basic Lean tools and proven concepts. The reader is guided on how to start implementing the Lean methodology and best practices in the industry to realize significant savings. Companies such as Adidas and Amazon are using transportation to increase sales by delivering purchased products faster than the competition. These companies do not treat transportation as a cost center. They are not focusing on reducing transportation spending. They allow customers to buy any product that is available in any store or warehouse and have it delivered to their homes. By delivering faster than the competition they increase sales. At the same time they lower their total supply chain costs as faster deliveries lead to fewer returns. Reduction of returns means higher sales and lower transportation costs for returns. The result is higher profits while creating more value for the customer. Transportation is moving from a cost center towards a profit center. The traditional logistics service providers are perceived to not innovate fast enough. Top management must understand the transportation management basics and use it in their strategic decision making. They should be involved in discussions on how to organize the transport management function in the best way and how to use it as a service differentiator. Transportation is more than the efficient movement of supplies sub assemblies and final products. In addition it is more than the key performance indicators on the business balanced scorecard. Transportation management professionals fail to catch top management's attention due to the use of technical language. It is more difficult to understand transportation key performance indicators such as loading degree net and gross pick up and delivery reliability. It is easier to get top management attention when talking about lost sales due to stock outs lost tenders due to long delivery times high inventory holding and scrap costs

     Kaur,2022-06-07 This book introduces a powerful system that explains how to run a company with a focus on continuous improvement The results are a satisfied customer base evolving products and an increase in revenue and profits These factors determine the success for any company because business transformation involves making fundamental changes in how business is conducted to cope with shifts in the market environment This a comprehensive book for valuable guidance on framing strategy and overcoming challenges for successful and sustainable implementation of a lean production system daily management system and lean accounting system in companies to empower the managers to serve their customers with timely delivery of quality products while maximizing profits and easing workloads The main challenge is ensuring operations colleagues in different functions understand the link between their daily work and the profit and loss statement In addition it

illustrates how finance personnel can assist the operations team and be a part of the transformation journey. This book is not meant to impart theoretical knowledge of the lean production system, daily management and lean accounting as there are many books already available that focus on the methodology instead of the implementation. This book empowers people in each function of a company irrespective of which level they work in the company and shows them the way to operate on a daily basis to achieve the company's strategy while simultaneously fulfilling their career goals. The book lays out a brief history of the evolution of lean concepts with a focus on lean accounting. This book guides the successful implementation and sustenance of lean and kaizen tools and provides answers to the questions: Who should lead the lean and kaizen implementation in the company? Where should the lean and kaizen journey begin? Which lean and kaizen tools should be implemented first? How important is capacity for the company? How much current capacity is wasted and how much free capacity is available? Where exactly are the resources being wasted in the company? How can the company reduce waste to release capacity for more production? Why should the daily management system and lean accounting system be implemented simultaneously with the lean production system? Why must managers understand the monetary value of their daily activities? Is there an easy way of making a profit and loss statement that is understood at each level in the company? Why is one day closing of accounts important and how can it be done?
