Corporate Foresight and Strategic Decisions S. Marinova, R. Ul-Haq, 2013-11-29 This study investigates the relationships between corporate foresight and management decision making processes in organizations. Decision Making and Problem Solving in Organizations: Assessing and Expanding the Carnegie Perspective Daniella Laureiro Martinez, Pino Audia, Daniel A. Newark, 2024-09-04 Within the broader study of decision making, the Carnegie perspective occupies a unique place. Initially developed by pioneering scholars such as Herbert Simon and James March, it views organizational decisions as resulting from the combined influences of a psychological processes of attention allocation, interpretation of experience, and motivated search, and b features of the organizational context that direct attention. Influence preferences contend with ambiguity, contain conflict, and divide labor. Despite its unique strengths and a considerable body of work, see below some foundational references, research that adopts the Carnegie perspective is still relatively unknown outside the field of organization studies. As James March noted, Carnegie has been primarily an importer of ideas rather than an exporter. The goal of this research topic is to facilitate dialogue and integration between this well-established Carnegie perspective and other lines of inquiry into the study of decision making and problem solving. We are interested in bringing to the fore what is distinctive in the accumulated body of evidence produced by the Carnegie perspective and highlighting similarities, differences, and potential points of connection with other research done on similar topics. To achieve this goal, we hope that the front end of each submission will cover the following four components.

New Developments in Evolutionary Innovation Gino Cattani, Mariano Mastrogiorgio, 2021-05-13 The growth of evolutionary thinking has had a profound impact on economic theory and related fields such as strategy and technological innovation. An important paradigm that underlies the evolutionary theory of innovation is neo-Darwinian evolution. According to this paradigm, evolution is gradualist and based on the mechanisms of variation, selection, and retention. Since the 1970s, theoretical advancements in evolutionary biology have recognised the central role of punctuated equilibrium, speciation, and exaptation. However, despite their significant influence in evolutionary biology, these advancements have been reflected only partially in evolutionary approaches to economics, strategy, and innovation. The aim of this book is to review these advancements and explore their implications with a particular emphasis on the role of serendipity and unprestigeability in innovation and novelty creation.

Handbook of Strategy and Management Andrew M. Pettigrew, Howard Thomas, Richard Whittington, 2006-04-27 New in Paperback Publishing February 2006. If you had to read only one book to understand the roots and branches of the study of strategy, it is also remarkably well organized and future

oriented having the right balance between focus and diversity. By critically taking stock of the field and by discussing future paths of strategy this Handbook will serve as an important stimulus for intellectual development for years to come. Nicolai Foss Copenhagen Business School. Finally We have a comprehensive reflective and critical overview of the field of strategy in the new Handbook of Strategy and Management. The strategy literature has come of age with this mapping of the terrain by Andrew Pettigrew Howard Thomas and Richard Whittington. The Handbook provides an useful overview of different streams of thought with contributions by leading scholars and researchers. Equally importantly this Handbook provides us with reflections on the past and insights into the future of the field. Such a critique is an important aid in understanding and researching strategy for newcomers and experienced scholars alike. Cynthia Hardy Head of Department of Management University of Melbourne. The Handbook presents a major retrospective and prospective overview of the strategic management field and will be an important benchmark volume for management scholars worldwide. The Handbook frames assesses and synthesizes the work in the field and helps to define and shape its current and future development. The editors combine focus with diversity in the material and approaches covered thus providing a powerful critical analysis and synthesis of diverse disciplinary contributions to this rapidly growing body of knowledge. Each of the four parts of this book concentrates on a specific area of strategy and management. Within these parts leading international scholars provide historical overviews of the key strands delineating the topography of their particular themes address the central problems and approaches which have characterized these critically assess the state and quality of current theory and knowledge and set out agendas for future theoretical and empirical development. The resulting volume is a unique overview of the inputs and dynamics that shape the core ideas and practices of strategy and management. Organizations in Time Marcelo Bucheli, R. Daniel Wadhwani, 2014. This book brings together leading organization scholars and business historians to examine the opportunities and challenges of incorporating historical research into the study of firms and markets. Technology and Culture, 2001. *Creating Value with Science and Technology* Eliezer Geisler, 2001-08-30. Do science and technology create value for society and the economy and how might one go about measuring it? How do we evaluate its benefits? Can we even be certain that there are benefits? Geisler argues that there are benefits and that they outweigh in value the negative impacts that inevitably accompany them. His revolutionary new book goes on to show that they can also be measured and evaluated and in one volume all of the existing knowledge on how to do it is complied then Geisler's own methods are offered. The result is a compelling argument that the value of science and technology in our lives has indeed been positive and that the economic well being of all individuals organizations and nations rests upon them. Geisler starts off by describing his conceptual framework for the evaluation of science and technology and the impact and benefits that proceed from them. He discusses the nature of evaluation in general terms and then in the specific context of science technology and innovation together. He reviews the state of our present knowledge and assesses the nature of value creation itself. Throughout Geisler

remains fixed on his driving thesis Although there are certainly some negative impacts from science and technology on the whole the results of its outputs are positive He shows how they have contributed to a range of activities and institutions particularly to the improvement of health and human welfare worldwide Finally after discussing the theories of evaluation he gets down to the practice providing readers with a way to assess science and technological innovations for themselves

The Innovation Journey

Andrew H. Van de Ven,2008 This book examines the results of a major study of innovation in organizations calling into question most of the explanations of the innovation process that have been proposed in the past The authors find that the innovation process is neither sequential and orderly nor is it a matter of random trial and error rather it is best characterized as a nonlinear dynamics system They explain that the innovation journey involves motivating and coordinating people to develop and implement ideas by engaging in transactions with others while making the adaptations needed to achieve desired outcomes within changing organizational contexts
