Miniaturized High-Power Solid-state Laser and Applications Zhi-Han Zhu,Zhenxu Bai,Baitao Zhang,Liyuan Chen,2023-06-07 **Military Laser Technology and Systems** David H. Titterton,2015-03-01 This new resource provides an insight into the physical principles of the device technology that underpins many laser based military systems in one form or another From this knowledge a deeper understanding of the fundamental requirements and the potential performance as well as limitations of such systems may be assessed given the appropriate operational parameters Engineers and students are provided with practical advice on how to evaluate laser devices and systems operate them safely and train with them

Two-step MOVPE, in-situ etching and buried implantation: applications to the realization of GaAs laser diodes Pietro della Casa,2021-03-25 This work is about two step epitaxial growth using metalorganic vapor phase epitaxy MOVPE for the realization of edge emitting near infrared laser diodes The fabricated gallium arsenide based devices fall into two categories high power lasers watt range multimodal and tunable lasers milliwatt range monomodal Common to both cases is that surface contamination particularly that due to oxygen needs to be removed before regrowth Thus in situ etching with carbon tetrabromide CBr₄ is first studied The experimental results include kinetic data the effects of different etching conditions as

well as substrate characteristics and the effectiveness in reducing surface contamination These investigations pave the way to devices based on 2 step epitaxy combined with in situ etching Correspondingly thermally tuned SG DBR lasers operating around 975 nm have been successfully realized obtaining a tuning range of 21 nm In addition the possibility of using electronic tuning in similar devices has been explored High power broad area lasers have also been realized using two step epitaxy combined with ex situ and in situ etching to create a buried shallow mesa containing the active zone This approach allows introducing lateral electrical and optical confinement and simultaneously non absorbing mirrors at the laser facets Additionally a different strategy to create a buried current aperture is presented which is based on ion implantation followed by epitaxial regrowth This enables to improve device performance and simultaneously introduce non absorbing mirrors at the facets with correspondingly increased reliability
