cybersecurity geoengineering and the myth of neutral technology **The Growing Gap Between Emerging Technologies and Legal-Ethical Oversight** Gary E. Marchant,Braden R. Allenby,Joseph R. Herkert,2011-05-19 At the same time that the pace of science and technology has greatly accelerated in recent decades our legal and ethical oversight mechanisms have become bogged down and slower This book addresses the growing gap between the pace of science and technology and the lagging responsiveness of legal and ethical oversight society relies on to govern emerging technologies Whether it be biotechnology genetic testing nanotechnology synthetic biology computer privacy autonomous robotics or any of the other many emerging technologies new approaches are needed to ensure appropriate and timely regulatory responses This book documents the problem and offers a toolbox of potential regulatory and governance approaches that might be used to ensure more responsive oversight *Inside the Energiewende* Christine Sturm,2020-04-27 This book tells the story of one nation s sustained efforts to steer its economy toward low carbon technologies and to define national and global pathways for mitigating climate change Drawing on a long career in Germany s energy sector and on subsequent academic research the book reveals the weaknesses of and critical trade offs in Germany s bold energy transition plan the Energiewende and explores their causes Its goal is to provide insights to help policymakers and energy managers keep some of the problems that have plagued the Energiewende at bay and to instead explore avenues that are more likely to succeed While such insights cannot solve the problem of socio technical change overnight they do reveal alternative transition pathways that keep climate goals clearly in sight even if they are pursued with a bit less exuberance and a bit more humility The book is addressed to academic professional and political readers alike <u>Developer's Dilemma</u> Casey O'Donnell,2014-11-21 Step inside the shoes of video game creators in this fascinating look at game development and how it can inform our understanding of work Rank and file game developers bring videogames from concept to product and yet their work is almost invisible hidden behind the famous names of publishers executives or console manufacturers In this book Casey O Donnell examines the creative collaborative practice of typical game developers His investigation of why game developers work the way they do sheds light on our understanding of work the organization of work and the market forces that shape and are shaped by media industries O Donnell shows that the ability to play with the underlying systems technical conceptual and social is at the core of creative and collaborative practice which is central to the New Economy When access to underlying systems is undermined so too is creative collaborative process Drawing on extensive fieldwork in game studios in the United States and India O Donnell stakes out new territory empirically conceptually and methodologically Mimicking the structure of videogames the book is divided into worlds within which are levels and each world ends with a boss fight a rant about lessons learned and tools mastered O Donnell describes the process of videogame development from pre production through production considering such aspects as experimental systems socially mandatory overtime and the perpetual startup machine that exhausts young initially enthusiastic workers He links work practice to broader systems of publishing manufacturing and

distribution introduces the concept of a privileged actor intra internetwork and describes patent and copyright enforcement by industry and the state **Producing Power** Sonja D. Schmid,2015-02-06 An examination of how the technical choices social hierarchies economic structures and political dynamics shaped the Soviet nuclear industry leading up to Chernobyl The Chernobyl disaster has been variously ascribed to human error reactor design flaws and industry mismanagement Six former Chernobyl employees were convicted of criminal negligence they defended themselves by pointing to reactor design issues Other observers blamed the Soviet style of ideologically driven economic and industrial management In Producing Power Sonja Schmid draws on interviews with veterans of the Soviet nuclear industry and extensive research in Russian archives as she examines these alternate accounts Rather than pursue one definitive explanation she investigates how each of these narratives makes sense in its own way and demonstrates that each implies adherence to a particular set of ideas about high risk technologies human machine interactions organizational methods for ensuring safety and productivity and even about the legitimacy of the Soviet state She also shows how these attitudes shaped and were shaped by the Soviet nuclear industry from its very beginnings Schmid explains that Soviet experts established nuclear power as a driving force of social not just technical progress She examines the Soviet nuclear industry s dual origins in weapons and electrification programs and she traces the emergence of nuclear power experts as a professional community Schmid also fundamentally reassesses the design choices for nuclear power reactors in the shadow of the Cold War s arms race Schmid s account helps us understand how and why a complex sociotechnical system broke down Chernobyl while unique and specific to the Soviet experience can also provide valuable lessons for contemporary nuclear projects **Beyond Imported Magic** Eden Medina,Ivan da Costa Marques,Christina Holmes,2014-08-15 Studies challenging the idea that technology and science flow only from global North to South The essays in this volume study the creation adaptation and use of science and technology in Latin America They challenge the view that scientific ideas and technology travel unchanged from the global North to the global South the view of technology as imported magic They describe not only alternate pathways for innovation invention and discovery but also how ideas and technologies circulate in Latin American contexts and transnationally The contributors explorations of these issues and their examination of specific Latin American experiences with science and technology offer a broader more nuanced understanding of how science technology politics and power interact in the past and present The essays in this book use methods from history and the social sciences to investigate forms of local creation and use of technologies the circulation of ideas people and artifacts in local and global networks and hybrid technologies and forms of knowledge production They address such topics as the work of female forensic geneticists in Colombia the pioneering Argentinean use of fingerprinting technology in the late nineteenth century the design use and meaning of the XO Laptops created and distributed by the One Laptop per Child Program and the development of nuclear energy in Argentina Mexico and Chile Contributors Pedro Ignacio Alonso Morgan G Ames Javiera Barandiar n Jo o Biehl Anita Say Chan Amy Cox Hall
