*Global change and human vulnerability to vector-borne diseases* Rubén Bueno-Marí, Ricardo Jiménez-Peydró, It is well known that several climatic environmental and socio demographic

changes that have occurred in the last years are some of the most important causes for the emergence resurgence of vector borne diseases worldwide Global change can be defined as the impact of human activity on the fundamental mechanisms of biosphere functioning Therefore global change includes not only climate change but also habitat transformation water cycle modification biodiversity loss synanthropic incursion of alien species into new territories or introduction of new chemicals in nature On this respect some of the effects of global change on vector borne diseases can be currently evaluated Globalization has enabled the movement of parasites viruses and vectors among different countries or even at intercontinental level On this regard it is important to note that the increase of imported malaria cases in different Southern European countries has led to the re appearance of autochthonous cases of disease transmission Moreover the used tire trade together with global warming have facilitated the introduction spread and establishment of potential Dengue tropical vectors such as *Aedes aegypti* or *Aedes albopictus* in temperate areas Consequently recently the first Dengue indigenous cases in the last decades have been reported in different Southern areas of North America and Europe Furthermore habitat modification mainly deforestation and transformation of aquatic environments together with the changes in thermal and rainfall patterns are two of the key factors to explain the increasing incidence of Leishmaniasis and several tick borne diseases The aim of this Research Topic is to cover all related fields with the binomial vector borne diseases global change including basic and applied research approaches to control measures explanations of new theories opinion articles reviews etc To discuss these issues a holistic and integrative point of view is necessary which only would be achieved by the close and active participation of specialists on entomology parasitology virology and epidemiology Our objective is to use a systems approach to the problem of global change and vector borne diseases To achieve this ambitious goal and to comply with a demand of first rate scientific and medical interest we are very keen on asking for the participation of multiple contributors

**Diseases Spread by Insects or Ticks** Mary E. Miller, 2018-01-24 Vector borne diseases transmitted through ticks and mosquitos cause serious loss of life and significantly impact human populations worldwide Each of these diseases is caused by a distinct pathogen and symptoms vary depending on the type and severity of infection The spread of these diseases occur through the blood meals of tick or mosquitos where the pathogen gains access to the human body usually triggering an immune response that contributes to disease progression Understanding the interdependence of pathogen to disease vector along with transmission route to humans shapes our diagnosis and treatment of these diseases This book

focuses on five distinct examples of vector borne disease Malaria West Nile Lyme disease dengue fever and bubonic plague Malaria involves the mosquito vector and occurs when mosquito transmit the Plasmodium parasite to humans West Nile and dengue fever also involve different mosquito vectors but in this case transmission of the West Nile virus or dengue fever virus cause disease Fleas transmit the bubonic plague causing bacterium Y pestis Lyme disease results from the transmission of the bacteria Borrelia burgdorferi to humans through the bite of a tick In each case we consider current and future issues related to disease progression diagnosis and treatments Ticks and Tick-Borne Pathogens Remo Hemsworth, 2023-09-19

Ticks are obligate ectoparasites which feed on the blood of their hosts They cause physical damage to their hosts by injuring skin and sucking blood Furthermore majority of the species of tick have the capability to transmit pathogens to their hosts They are often more active in warmer months and a change in the populations of their hosts affects tick populations Tick borne diseases are those diseases that afflict humans and animals and are caused by infectious agents transmitted by tick bites Various pathogens comprising rickettsia and other types of bacteria viruses and protozoa are the primary causes of the infection resulting in diseases There are various symptoms a person may feel after being bitten by a tick such as body aches fever fatigue joint pain or rashes This book provides comprehensive insights on ticks and tick borne pathogens It presents researches and studies performed by experts across the globe Those with an interest in these pathogens would find this book helpful
