The **details** are parts of the story that make it more interesting.

Chances are, if you've seen a spider, their web is nearby. Spiders make their webs with an organ on their underside called a spinneret. The spinneret spins silk together, making threads. Spiders can make these threads thick and strong, or they can make them thin and difficult to see. Spiders begin making their web by forming thread triangles side by side. Once the spider has completed the triangles, it will go to the center of the formation, and spin thread in an outward direction making a spiral.
