**Managing the Paralympics** Simon Darcy, Stephen Frawley, Daryl Adair, 2017-02-08 This book critically examines the planning management and operations of the world's premier event for Para sport athletes. Noting a lack of research into how these games are planned and managed, the authors of this contributed volume discuss how the Paralympics are essentially different to the Olympics and what this means for their management. *Managing the Paralympics* explores how the organizers and connected stakeholders effectively organize and deliver the Paralympics, taking into account what has been learned from previous events. Including emergent models of best practice from event management, project management and sport management literature, the book gives an insight into the planning of one of the world's biggest sporting events that encompasses ten impairment types and multiple sport classes within sports. *Managing the Olympics* S. Frawley, D. Adair, 2013-07-23 The Olympic Games are the world's most complex and challenging sport mega event to organize. *Managing the Olympics* is the first ever attempt to bring together the world's leading Olympic management researchers in one book and draws on the latest research into the management challenges faced by the organizers and key stakeholders of the Games.

**Urban Transformations through Exceptional Architecture** Nadia Alaily-Mattar, Alain Thierstein, 2021-05-30 *Urban Transformations through Exceptional Architecture* focusses on the nexus between architecturally exceptional projects and the city. It addresses the following questions: How can the complexity of these projects be comprehended? What roles do the political contexts play in the commissioning of such projects and what audiences do these projects serve? How has the granting of professional recognition for architects changed and what will this change mean to measures of exceptionality in architectural design? What roles do the architectural competitions play in the process of commissioning the design of architecturally exceptional projects and do design competitions as an urban planning tool grant high value designs? Architecturally exceptional projects are situated in physical urban fabrics. How can this situatedness be analysed and what different values does the urban design dimension of these projects add? By considering diverse aspects of architecturally exceptional projects, the chapters in this book utilise a variety of research methods. They bring into dialogue a range of themes regarding the architectural, urban design and political aspects of these projects. This volume illustrates that multidisciplinary might well be the best strategy to balance the risks of over-simplification and the challenges of complexity in analysing these exceptional projects and the city in its ever-transformative process. The chapters in this book were originally published as a special issue of the *Journal of Urban Design*. **Metric Handbook** David Littlefield, 2012 For each building type, the book gives basic design requirements, principal dimensional data and details of relevant building regulations. The book also contains information on broader aspects of design applicable to all building types, such as materials, acoustics and lighting, and data on human dimensions and space requirements. Significantly updated, the new edition of this work focuses on sustainable design practice to make projects competitive within a green market. 2008-01-01, 2008 18
