

## Technical Manual

The credit descriptions in the STARS Technical Manual include the following sections which inform data gathering and the reporting process:

- **Credit Rationale**—provides background on the importance of the credit in the context of sustainability.
- **Criteria**—describes how an institution earns points for the credit.
- **Applicability**—indicates which institutions' STARS Ratings will be affected by their responses to the credit. As previously mentioned, some credits do not apply to some types of institutions. For example, credits involving residence halls do not apply to institutions that do not have residence halls.
- **Scoring**—explains how points are allocated for the credit.
- **Reporting Fields**—lists the fields that appear within the Reporting Tool for each credit. Some fields are required while others are listed as optional if the institution wishes to provide additional information.
- **Timeframe**—describes the time period from which data should be drawn. For some credits, particularly those that are based on the presence of a policy or program, institutions should report on current practices (i.e. status at the time of reporting). Other credits, particularly those based on quantitative performance, require historical performance data, typically drawn from a one-year period.
- **Sampling and Data Standards**—provides guidelines on when institutions may use a representative sample to measure performance and when samples are prohibited.

## Technical Manual Template:

Technical Documentation Best Practices - Visually Designing Modern Help Systems and Manuals Marc Achteleg, 2020-10-25 Aesthetics isn't the only thing that you should be striving for when designing a user manual template or the style sheet of an online help system. When creating technical documentation, usability, readability, and simplicity are at least just as crucial. The design should please the eye, but at the same time, it must communicate the content clearly. In addition, paragraph styles and character styles should be efficient to use for the author when writing the document. The layout process should be automated as much as possible. Because most user assistance documents are frequently updated during their life cycle, an automated layout process is much more important here than with other kinds of literature. Setting up templates and style sheets that are efficient to use when creating and updating user assistance requires a lot of experience in technical writing. The rules presented in this book are the essence of this experience. All chapters provide various examples that you can use for inspiration and as starting points for your own designs. Topics covered: Layout basics, Setting the type area, Choosing fonts and spacing, Creating semantic styles, Organizing styles hierarchically, Recommended screen layouts, Recommended page layouts, Recommended table designs, Recommended paragraph styles, Recommended character styles. *Technical Manual* United States.
