

## Technical Manual

The credit descriptions in the STARS Technical Manual include the following sections which inform data gathering and the reporting process:

- **Credit Rationale**—provides background on the importance of the credit in the context of sustainability.
- **Criteria**—describes how an institution earns points for the credit.
- **Applicability**—indicates which institutions' STARS Ratings will be affected by their responses to the credit. As previously mentioned, some credits do not apply to some types of institutions. For example, credits involving residence halls do not apply to institutions that do not have residence halls.
- **Scoring**—explains how points are allocated for the credit.
- **Reporting Fields**—lists the fields that appear within the Reporting Tool for each credit. Some fields are required while others are listed as optional if the institution wishes to provide additional information.
- **Timeframe**—describes the time period from which data should be drawn. For some credits, particularly those that are based on the presence of a policy or program, institutions should report on current practices (i.e. status at the time of reporting). Other credits, particularly those based on quantitative performance, require historical performance data, typically drawn from a one-year period.
- **Sampling and Data Standards**—provides guidelines on when institutions may use a representative sample to measure performance and when samples are prohibited.

Project Management and Six Sigma provides templates for the various policies procedures and forms that should be

contained in the quality assurance operational and technical manuals of a laboratory seeking accreditation Templates for the

entire project life cycle The book begins with a general introduction and overview of quality assurance and then moves on to

cover implementation strategies It contains best practices and templates for the project management of the design and

implementation of the laboratory operational and technical manuals required to establish a quality assurance program The

templates span the entire project life cycle from initiation to planning to execution to monitoring and finally to closure The

book also examines how Six Sigma concepts can be used to optimize laboratories and contains templates that cover

administrative issues quality assurance sample control and health and safety issues In addition there is a section of criteria

files that relate the individual document templates to specific accreditation criterion Addresses the standards of ISO 17025 The results of any laboratory examination have the potential to be presented in court and can ultimately affect the life and liberty of the parties involved Therefore a stringent quality assurance program including well documented policies and a procedure manual is essential Ensuring that laboratories meet the standards of ISO 17025 this volume is a critical component of any laboratory s accreditation process
