Tight Junctions Molecular Biology Intelligence Unit:

Tight Junctions Lorenza González-Mariscal, 2007-02-26 Tight junctions TJs are cell cell adhesion belts that encircle epithelial and endothelial cells at the limit between the apical and the lateral membrane. These junctions are crucial for the establishment of separate compartments in multicellular organisms and for the exchange of substances between the internal milieu and the external environment. The perception of TJs has changed over the years. From being regarded as static paracellular seals, they have come to be perceived as dynamic structures that adjust their morphology and function in response to physiological, pharmacological, and pathological challenges. The roles that TJs play in epithelial and endothelial cells has also widened, and nowadays this structure is regarded not only as a fence that limits within the membrane the movement of proteins and lipids between the apical and basolateral membranes or as a gate that regulates in a size and charge selective manner the transit of ion and molecules through the paracellular pathway but also as a structure integrated by molecules that participate in the control of cell proliferation. These observations highlight the importance of understanding TJ physiology in order to develop effective strategies for the treatment of pathological conditions such as cancer and autoimmune diseases. This broader perception of TJs is reflected in all the chapters of the book and has been attained thanks to the identification in recent years of a wide array of proteins that constitute TJs in epithelial and endothelial cells as well as in central nervous system myelin. *Molecular Mechanisms of Epithelial Cell Junctions* Sandra Citi, 1994. This text examines past and current progress on the structural, biochemical, and molecular characterization of specialized cell cell junctions in various types of epithelial tissue. Special attention is devoted to the recent characterization of specific protein components of junctions and to questions of structure-function relationships in development, disease, and phylogeny in epithelial junctions.
