straight from the natural resource is something they have in common with oil and metals but the fact that they grow in living systems places them closer to crops Natural forest ecosystems are not renewable Timber producing trees however can be made into a renewable resource on condition that ways and means are found to cultivate them as a crop be understood as a socio economic The tropical hardwood situation can best chain with the resource base at one end the consumer community at the other and everything that has to do with the market in the middle Now at the resource side the economics of tropical hardwood extraction barely got out of the primeval ways of wood gathering by hand and by axe which were still predominant in the nineteen forties There the offer of natural products was so immense and so near to hand that no care had to be taken of the resource
