When you take a discount, you are like 20% off. It means you're paying less than the original price. Here's how you figure out the new price:

1. **Step-by-step:**

1. Find the discount amount.
2. Multiply the original price by the discount percent (as a decimal).
3.  $\text{New Price} = \text{Original Price} - \text{Discount}$
4. Subtract the discount from the original price.
5.  $\text{New Price} = \text{Original Price} - \text{Discount}$

## Example:

Original price: \$100 and a 20% off. What is the new price?

1.  $20\% = 0.20$
2.  $\text{Discount} = \$100 \times 0.20$
3.  $\text{New Price}$
4.  $\text{Subtract the amount}$
5.  $\text{New Price} = \$100 - \$20 = \$80$
6. The new price is \$80.

Directions: Identify the amount that will be taken off the original price, and then identify the new price after discount. Round to the nearest hundredth if needed (at the discount step).

**Extra Investigations** Christian Puritz, 2019-01-21 The author spent many years teaching at a selective school with the constant challenge of including the most able students whilst at the same time avoiding the danger of excluding the rest of a class. These blackline masters are the result many of them include fairly routine work but each graduates to more difficult questions to provide a challenge for the really able. The answer sections provide guidance on these difficult questions. Book S: Probability taken further. Looking at data, Possibilities and probabilities, Modulus, arithmetic, Triangular numbers, Half pint mugs, Areas and lattice points, Production and Marketing, Matrices, Strange rollers, Drilled and painted cubes.

*Python And Matlab Computer Codes* Cornelis W Oosterlee, Lech A Grzelak, 2019-10-29 This book discusses the interplay of stochastics, applied probability theory and numerical analysis in the field of quantitative finance. The stochastic models, numerical valuation techniques, computational aspects, financial products and risk management applications presented will enable readers to progress in the challenging field of computational finance. When the behavior of financial market participants changes, the corresponding stochastic mathematical models describing the prices may also change. Financial regulation may play a role in such changes too. The book thus presents several models for stock prices, interest rates as well as foreign exchange rates with increasing complexity across the chapters. As is said in the industry: do not fall in love with your favorite model. The book covers equity models before moving to short rate and other interest rate models. We cast these

models for interest rate into the Heath Jarrow Morton framework show relations between the different models and explain a few interest rate products and their pricing The chapters are accompanied by exercises Students can access solutions to selected exercises while complete solutions are made available to instructors The MATLAB and Python computer codes used for most tables and figures in the book are made available for both print and e book users This book will be useful for people working in the financial industry for those aiming to work there one day and for anyone interested in quantitative finance The topics that are discussed are relevant for MSc and PhD students academic researchers and for quants in the financial industry
