In order to prevent soil degradation and to rehabilitate the potentials of degraded soils reliable soil data are the most important prerequisites for the design of appropriate land use systems and soil management practices as well as for a better understanding of the environment. The availability of reliable information on soil morphology and other characteristics obtained through examination and description of the soil in the field is essential and the use of a common language is of prime importance. These guidelines based on the latest internationally accepted systems and classifications provide a complete procedure for soil description and for collecting field data.
